

TEKWOOD

DESCRIPTION

Tekwood is a wood-alternative material developed from polystyrene, an HDPE material with foam additives. Tekwood is available as an option for this Collection in either natural or vintage finish. Designed for the outdoors, Tekwood provides the look and feel of wood with minimal weathering or maintenance.

DURABILITY

The Tekwood material has undergone testing to determine its durability and color sustainability in outdoor environments. These tests revealed that Tekwood maintains its form with no deterioration in structural integrity and minimal change in appearance, when used properly and exposed to normal outdoor and weather conditions.

When exposed to direct sunlight, magnification from the sun can cause burn marks on Tekwood. To avoid these burn marks, do not use certain glass or stemware that could increase the magnification. Also, avoid leaving lighters, matches or cigarettes directly on Tekwood.

CARE AND MAINTENANCE

Tekwood products should be cleansed using a mild, non-abrasive cleanser and rinsed well. Over time, Tekwood's color may darken slightly if exposed to sun and other natural elements. This process cannot be reversed, but does not affect the structural integrity or aesthetic of the product. To prolong this process, this manufacturer recommends bringing furniture indoors or covering when not in use or during non-seasonal months. Tekwood has the potential to stain. To help prevent staining, use a furniture polish or protectant that is labeled safe for plastic materials prior to use.
