Tiki Bar Stool Assembly

The stools come partly assembled. Into one of the assembled sides

Tap the tenons of the stool's stretchers into the holes using a rubber mallet.

Repeat for the other side.

Assemble the two halves of the stool by tapping mortise and tenon joints together fully with a rubber mallet, as shown.

Drive one 4" wood screw into each joint at approximately 45 degrees, as shown. (4 places)

Place the stool seat upside down on a smooth surface that won't scratch it, and centre the base assembly onto it, as shown.

Fasten the base assembly to the stool seat using six 1½" pocket screws per bracket as shown in the sketch below.
