

Installation Guide

1. Place the mirror in the desired location on the wall. Mark a line on the wall at the top-center of the mirror (two people are recommended for this step). Carefully set the mirror aside when complete.
 2. Position the Wall Bracket so that the top of the bracket is 3" below the Top of Mirror Line from step #1. Use a level to ensure the Wall Bracket is level, then mark the positions of the Wall Bracket Screw Holes.
- Note: The screw holes should be on the bottom. See illustrations.*
3. Using a ¼-inch bit, drill pilot holes into the marked locations. Insert the provided anchors until flush with the wall surface. Place the Wall Bracket onto the wall and secure with the provided screws.
 4. If desired, apply two rubber bumpers on the back of the mirror near the bottom corners.
 5. Carefully hang the mirror by placing the Mirror Mounting Plate onto the Wall Bracket. Positioning can be adjusted side to side by gently sliding the mirror along the bracket.

Care Guide

Pro Tips

The best and safest way to clean your mirror is by using warm water and a soft, lint-free cloth.

Wring water from the cloth before wiping the mirror to avoid excess moisture.

Keep bathrooms well ventilated.

Oil-free #0000 steel wool is a great way to remove stubborn marks on glass (this is a favorite tool in our workshop).

If a cleaning agent is required, use an ammonia-free option (Windex® Ammonia-Free Glass Cleaner is great).

Things to Avoid

Avoid using cleaners that contain ammonia or vinegar—these can cause corrosion on the edges of the mirror. Never use abrasive cleaners.

If your mirror sits directly on a vanity, avoid letting water puddle along the bottom of the mirror.

Avoid spraying cleaners directly onto the mirror.
