

SINGLE-HANDLE LAVATORY FAUCET INSTALLATION

INSTALLATION MANUAL Tools you will need:

Adjustable wrench

Hexagon wrench

Phillips Screwdriver

Notes before installation:

1. Please check that all components are present.
2. Before Installation ensure that all feed lines are clear of debris and on/off valve present.
3. Ensure water pressure is between 20-125PSI (Includes combination of hot and cold feed lines).
4. If you are having difficulties please contact a professional plumber.
5. If you will be away from home for an extended period you should shut off the main water supply.

Daily maintenance:

1. Use a soft cloth and vinegar to remove hard-water spots.
2. Check aerator (if present) regularly for calcium build up are when water stream is not optimum.
3. DO NOT use caustic cleaning products as the use will break down finish and will void the product warranty.
4. Acceptable cleaners include vinegar or mild non-abrasive liquid detergents.
5. If the water pressure appears to be less than optimum remove, inspect, clean or replace aerator.

1. Remove the rubber washer, metal washer and locking nut from faucet.

2. Screw and hand tighten the hot and cold flexible hoses to the faucet. DO NOT use a wrench to tighten hoses as this may damage the hose and/or the hose threads.

3. Install faucet through center hole.

4. Re-install the rubber washer followed by the metal washer and lock-nut. Hand tighten then tighten further using a screw driver to tighten lock-nut screws.

5. Attach flexible hose to water supply.

6. Remove the aerator and turn on faucet for 1-minute to flush debris from faucet and feed lines. Turn off and re-install aerator.
