

5ft of LEDs line the back and are controlled by 3 different buttons located on the back of the hanger, no external remote. The lights are battery operated by three AA batteries (not included) and the battery box is held with velcro for easy removal when it's time to change batteries. 20 color options and 8 levels of brightness/speed. It can stay static on one color or rotate between all 20. Watch video for demonstration. Works great for mine! Message with any questions.
