

Kitchen Island Assembly Instructions

Step one: Attaching legs

Flip the kitchen island on its top. Align the leg with the pre-drilled holes. With the drill tip and screw provided, screw the leg into the apron. Repeat this step for the remaining legs.

Step two: Attach shelves

Insert screw into the pre-drilled hole on the bottom of each corner of the shelf (pictured). Screw the shelf into each leg. Lining the shelf up with the pre-drilled holes will ensure each shelf is level. Repeat this step for each corner of each shelf. *Be careful not to over tighten. Over tightening may lead to cracking.

Step three: Adjustable feet

Each foot of the island has an adjustable foot to help keep the island level on uneven surfaces. Twist the foot to the left to increase the height, and twist to the right to decrease. *Wood expands and contracts seasonally, so you may need to adjust the feet periodically. Extra screws may be included.
