

Instruction Manual

Model: MW-200Multi

The Mosquito Warden helps control mosquitos without any harsh chemicals or fumes. The unique CO² scent combined with the bug-attracting light attracts mosquitos, while the strong suction draws them in, trapping them in the collection tray beneath the unit. The Mosquito Warden covers an area of 1100 SQ/FT per unit and can be easily combined with multiple units to protect larger areas.

Warning:

1. Keep this unit and cord out of reach of children under 8 years old.
2. Never put any objects inside the unit while in operation.
3. Keep away from flammables.
4. If damaged, supply cords must be repaired or replaced.

This appliance is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Liquid Attracting Tray:

This attracting tray is detachable and easy to be mounted on the unit. Flying insects, such as mosquitoes and flies, are very sensitive to the below DIY attractants. These methods can increase at least 30% attraction rate together with the bug attracting light.

Attractants such as:

Mosquitoes

- Beer

Flies

- Sugar water
- Yogurt
- Fruit

Operating Guide:

For the best results on usage of the Mosquito Warden, we suggest it be placed in a dark, calm place or hanging approximately 24 - 48 inches above the ground around the protected area. Clean the collection tray regularly. We suggest that you clean the device weekly. You may attach up to 12 Mosquito Warden units together to a single low voltage circuit (wired parallel). It is best to place units up to 35 feet apart surrounding the areas you want protected.
