

Animated Cupid Shooting Arrow Through Heart

Animated Cupid Shooting Arrow Through Heart is made in two pieces, one heart with arrow and one cupid with bow. Using the provided extension cords, plug the male end of the smaller bow and the arrow on the bow into the female end of the first extension cord. Then, plug the larger bow and the arrow on the heart into the female end of the second extension cord. Plug the cupid's body and heart straight into power. Plug each of the extension cord male ends into the female ends on the provided 2-channel controller. Plug the controller directly into power. Adjust the speed by turning the knob at the top of the controller. This will create the animation to look like the cupid is shooting the arrow into the heart.

We advise that you cover the animation controller with a plastic bag and point the animation cords downward to reduce potential water damage. Leave one side of the bag open to reduce condensation. Please do not place the animation controller on the ground.

Please refer to the animation video on our website for more information:
