

# BED FRAME - ASSEMBLY GUIDE

- We recommend the assembly is done by two people
- Tools required: adjustable spanner, screwdriver
- Assembly Time: 20-40 minutes

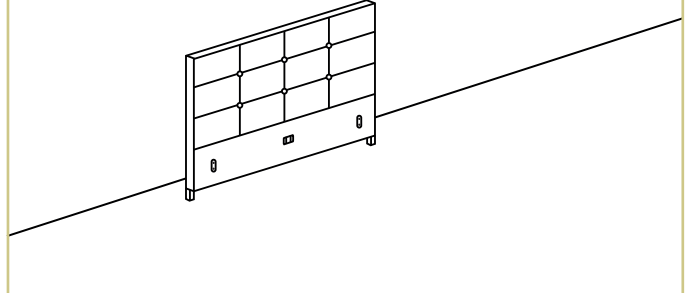

**1**

If not already attached, screw the feet on to the headboard and footboard

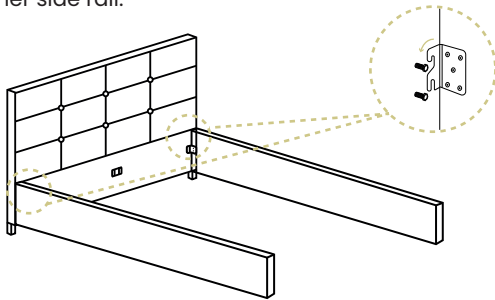

**2**

For support, we recommend leaning the headboard against the wall.

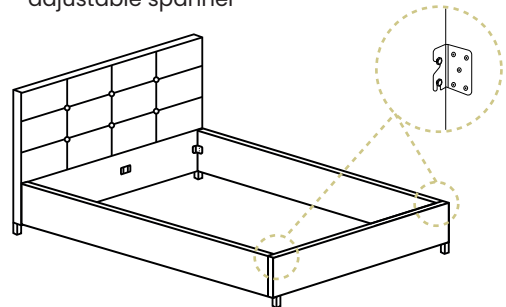

**3**

Attach the one of the side rails to the headboard and tighten the nuts by hand. Repeat for the other side rail.

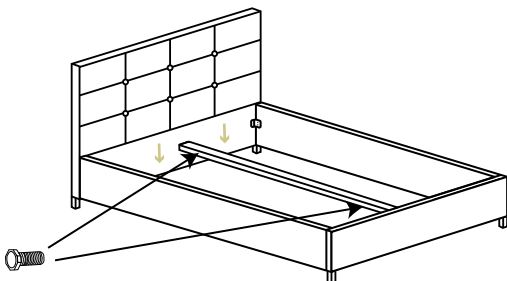

**4**

Now do the same for the foot end of the bed. Fully tighten all bolts using a 14mm or adjustable spanner

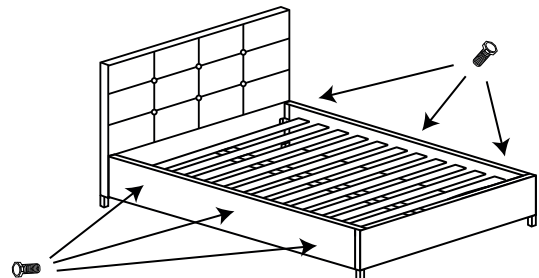

**5**

Place the support beam(s) in the already positioned u-clips and screw in place to secure at both ends.

**6**

Place the slats or base boards on the bed. (For slats we recommend screwing in the two end and middle slats to hold firmly in position)

**Your bed is ready,  
place the mattress  
and enjoy!**
