

Metal Locker Installation Instructions

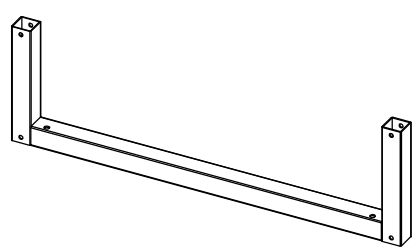

Pre-installation Preparation

1. After unpacking, check the above parts list first to ensure all parts are complete, without damage or deformation. Contact after-sales service in time if any parts are missing or damaged.
2. Prepare installation tools: Phillips screwdriver, regular-specification wrench. It is recommended to wear non-slip gloves during operation to avoid scratches from metal parts.
3. Choose a flat and stable ground/wall (if fixation is needed) for placing the locker, clean up debris in the installation area and reserve enough operating space.
