

Selecting the Proper Curtain Size

1] CURTAIN WIDTH

For the creation of attractive folds, we recommend selecting a curtain that is 2x wider than the pole or track

Grommet

Pole

Track

2] CURTAIN LENGTH

Curtains are measured from the top of the fabric to the bottom. Standard sizes are easily available and may determine where rods are mounted or if hemming is necessary. There are a number of lengths and the longer the style, the more formal it appears.

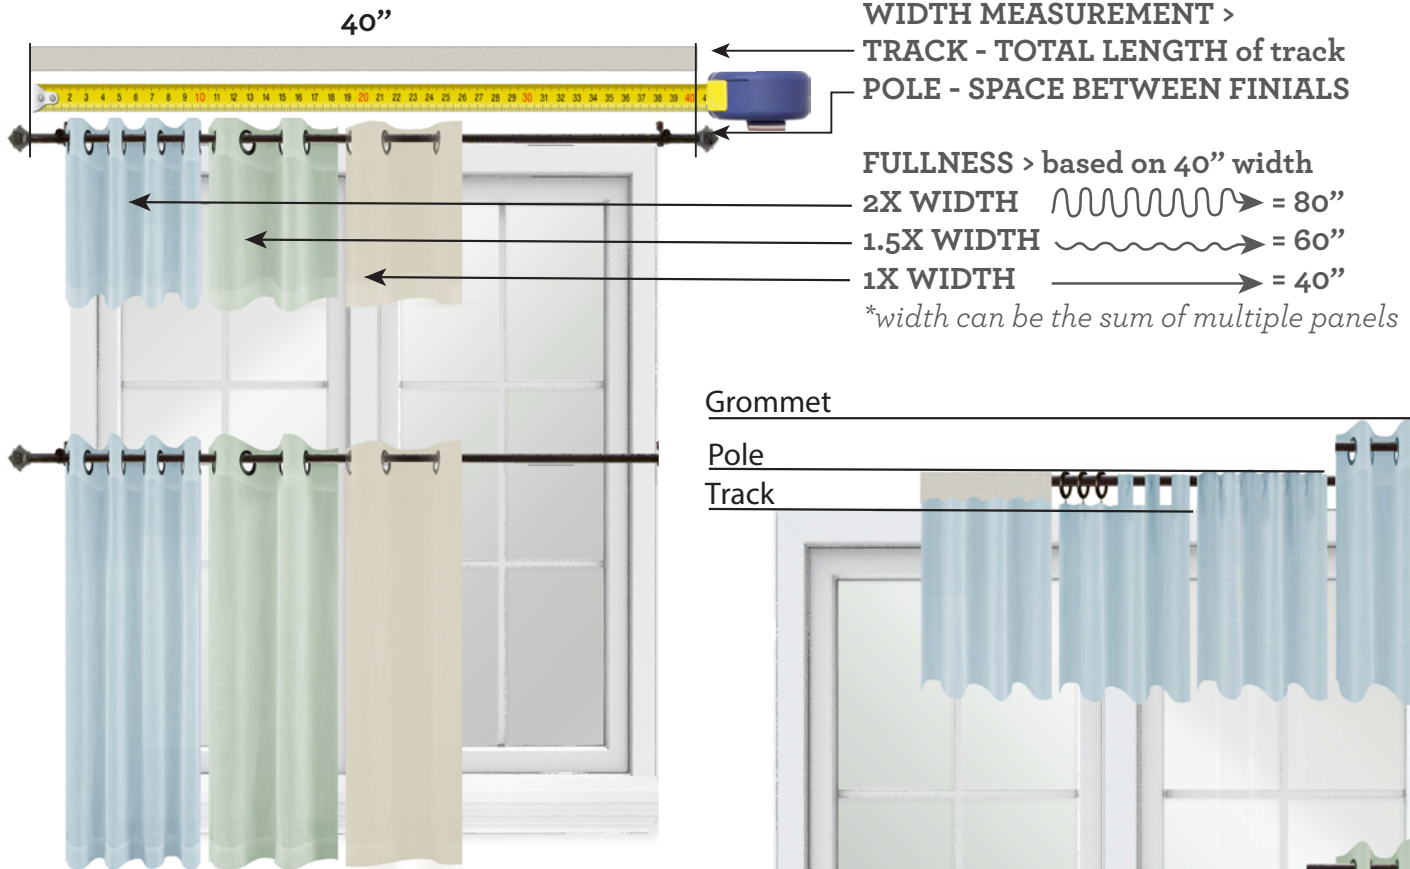

-  **SHORT** falls just on the sill
-  **MID** falls about 3" below sill
-  **LONG** falls 1" above the floor
-  **EXTRA LONG** mount rod just below ceiling and let curtain pool slightly on the floor

Selecting the Proper Valance and Tier Sizes

1] VALANCE AND TIER WIDTH

For the creation of attractive folds, we recommend selecting a valance that is 2x wider than the pole or track

2] VALANCE AND TIER LENGTH

Valances and Tiers are measured from the top of the fabric to the bottom. Standard sizes are easily available and may determine where rods are mounted or if hemming is necessary.

- VALANCES typically 1/4 window height plus 1"
- TIERS typically cover the bottom half of the window and are short or mid-length
