

World's population is growing. And, with it, world consumption. Thus the use of planet's natural resources is increasing at an alarming rate, meaning these resources are undergoing progressive and increasingly-worrying depletion. Air pollution, overexploitation of forests, overfishing: data reveal that to support global consumptions today, we would need 1.6 Earths.

# <u>How many Earths</u> do we need?

#### EACH YEAR **100 BILLION** PET BOTTLES ARE CONSUMED.

Only 14% of plastic waste is recycled. And what about the rest? The rest is dispersed.

The production of plastics has grown steadily from the 50s to today: in 1950, the global production amounted to 1.5 million ton; in 1976 it crossed the threshold of 50 million tons; in 1989 it crossed that of 100 million tons per year; in 2015 the value was 322 million tons, and forecasts point to a doubling in production within the next two decades.

6

Only 14% of this plastic is recycled: 40% ends up in landfills, 14% in incinerators or in energy recovery plants, 32% is released into the environment, in particular into the sea. (data: World Economic Forum)

The most reliable and shared estimates indicate that a total weight of 150 million tons of plastic are found in the oceans: as plastic bottles are very light, the space they take up is huge. (data: World Economic Forum).

Plus, plastic bottles take a thousand years to dissolve: they float and are carried by currents and broken up into smaller pieces, which then group into clusters, forming real islands and damaging marine fauna that feeds on this debris.

**Every piece of plastic** ever made still exists today.

The 7th Environment Action Programme sets the following priority objectives for waste policy in the EU:

- TO **REDUCE** THE AMOUNT OF WASTE GENERATED
- TO MAXIMISE RECYCLING AND RE-USE
- TO PHASE OUT LANDFILLING TO ONLY NON-RECYCLABLE AND NON-RECOVERABLE WASTE
- TARGETS OF ALL MEMBERS

## **IT WAS** AN ETHICAL ISSUE. NOW IT IS AN ACT.

• TO LIMIT INCINERATION TO NON-RECYCLABLE MATERIALS

• TO ENSURE FULL IMPLEMENTATION OF THE WASTE POLICY

In 2017, the Commission will continue to deliver on the Circular Economy Action Plan.

This will include the presentation of a strategy for plastics in the circular economy, an assessment of options for the improved interface between chemicals, products and waste legislation, a legislative proposal on water reuse and a monitoring framework on circular economy.

#### **EVERYONE CONSUMES**.

Everyone influences our planet's health. Everyone can make the difference.

#### We want to make it.

10

Faced with these scenarios, the possible solution strategies are those that involve the behaviour of every person.

Everyone can help to safeguard the health of the planet by trying to lengthen the life-cycle of plastic, avoiding discarding it in the environment after a single use, and correctly recycling the waste. And by businesses, by experimenting with innovative technologies that can optimize processes or create alternatives.

We have done this.

### WE ALWAYS THROW BOTTLES AWAY. NOW WE CAN GIVE THEM A NEW LIFE.

3B

3B devoted two years of research and testing of plastics and bioplastics. The process began with the aim of achieving sustainable production decisions in line with a corporate vision that has consistently believed in the value of contributing to preserving planet's well-being.

From these studies we obtained a technology that changes the lifecycle of plastic bottles forever, turning their end into a new beginning.

**CARE FOR** THE PLANET. THE FIRST PANEL MADE WITH 100% RECYCLED PET.

collection of PET bottles

### **FROM BOTTLE TO FURNITURE.**

14

A pioneer in the field, 3B introduces the market to, the first panel obtained by using a 100% RECYCLED PET resin.

From plastic water bottles, through a process of fragmentation, purifi cation and extrusion, we create laminates of recycled PET that can be reused to manufacture doors and furniture components.

elimination of metals

5. elimination of labels

by extrusion of the flakes

9 lamination or thermoforming of the sheet layer on the panel

10. marking of the door or component to guarantee quality and item traceability

#### WHERE PET ENDS THE FUTURE BEGINS.

the eco-friendly technology that

**3B** 

## x1=25 x

Recycling PET helps reduce the overall process of **disposing of plastic**. To create one medium-sized door with **25 halfliter PET bottles** are recycled and reused.

## >0,5 lt

It does not use **fossil fuels**, those non-renewable sources which use compromise their availability for future generations. Compared to conventional technologies, the manufacturing of one door with **saves half a liter of oil**.

Compared to newly-manufactured PET, allows a 60% reduction in CO2 emissions.

### CONSERVES NATURAL RESOURCES

preserving the environment for future generations.

## REDUCES THE NEED FOR LANDFILLS

18

and incinerators because when materials are recycled, less waste is sent to disposal facilities.

### PREVENTS POLLUTION

and reduces greenhouse gas emissions caused by the extraction and processing of raw materials.

## SAVES ENERGY

eliminating the need to extract and process raw materials.

<u>Scientists predict that,</u> <u>in 2050, the sea will</u> <u>contain a ratio of 1 kg of</u> <u>plastic for every kg of</u> <u>fish.</u>

data: World Economic Forum

Panels are available in all types of finish, and with the same intrinsic qualities of a new material.

3B

THE SAME QUALITY OF A NEW MATERIAL, MORE POSSIBILITIES OF APPLICATIONS AND EFFECTS.

AVAILABLE IN ALL COLOUR VARIATIONS, IN GLOSS AND MATT FINISHES, CUSTOMIZABLE WITH WOOD PRINTS AND ABSTRACT PATTERNS, HIGH PERFORMANCE ON SMOOTH SURFACES AS WELL AS SHAPED SURFACES AND UNDERCUT PROFILES.

#### RESPECT COMES FROM AFAR.

## **3B**: A COMPANY **AWARE OF** THE VALUE OF **PROTECTING.**

**ALWAYS ABLE** TO CREATE INNOVATION.

**ALWAYS** ABLE TO UNDERSTAND MARKETS AND TRENDS.

#### **ITALIAN ENERGY, INTERNATIONAL VISION.**

Since 1945, 3B has put all its energy into research to develop new technology, engineer new operational procedures, and create new aesthetic solutions. So, we can maintain our position as a worldwide leader in the furniture door-and-components sector. This is our competitive advantage, and we know we must devote all our energy to it.

#### ENTIRELY MADE IN ITALY, REACHING OUT THE WORLD OVER.

Our entire production is made in Italy, at two facilities that cover 200,000 square meters: 130,000 of which are covered. 800 employees work in shifts to maintain a 24-hour production cycle, seven days a week.

Our highest standards keep the production time of our customers' requests to a minimum, by providing reliable products that match Italian guality with cost effectiveness. Our goal is to translate quality into fast delivery worldwide.

#### SAFETY FOR HUMANS AND THE ENVIRONMENT.

3B has always paid particular attention to scrupulously meeting all the safety standards required to create a safe and healthy work environment. We dedicate the same attention to the environment in which we live, by adopting corporate policies to reduce the wastage of raw materials and to handle waste disposal.

3B collaborates with important customers worldwide to guarantee 100% recyclable packaging. We have obtained ISO 14001 certification for our efforts.

## 3B.

#### SINCE 1945, 3B HAS BEEN PURSUING ONE PATH: THE PATH OF EVOLUTION.

1999

ж.

2011/

2013

- The small carpenter's workshop opened 1945 by Giovanni Bergamo in San Biagio di Callata in the province of Treviso rapidly developed into a large-scale company through the spirit of innovation and the intuition of the Bergamo brothers.
- The Salgareda plant was opened specializing 1969 in doors and wardrobes. 11
- 3B was the market leader producing MDF 1982 panels using 2Sides technology.
- Evolution took the form of **3B Round** with 1987 four rounded sides for modelling alternative shapes.
- 1995 The production of five-piece doors began, followed by the creation of a 3B Style Centre.
- Showroom and a creative workshop which 1996 today showcases over 4,200 doors in different settings: kitchens, bathrooms, living rooms...
  - Saw the advent of flat-pack furniture from design to production and packaging.
- 3B was in the lead of the field again in 2001 2001 with RT technology for the production of 3B Acrilux and 3B Lux. The winning features of these new products were their luminosity, aesthetic appeal, durability and low environmental impact.
- 2008 Saw the birth of the exclusive 3B Graphic technology for precision printing on a wide range of materials with different color solutions, followed by 3B Touch for the creation of raised patterns in all shapes from textured finishes to graphic designs.
  - 3B's research culminated in 3BFluid Technology and the Maxxi-Gloss<sup>®</sup>. Maxxi-Mat<sup>®</sup>, Semi-Gloss, Dynamic Decor and Mirror products.
  - 3B wins the RED DOT Award with the patented process

reddot award 2017 honourable mention

The Red Dot jury awarded the title "Honourable Mention" for a particularly well executed aspect of design work .

#### OUR CERTIFICATIONS SPEAK FOR US.

We are committed to the continuous, consistent development of quality in all its facets. We have a certified management system **UNI EN ISO 9001 - 2008** and **UNI EN ISO 14000**, as well as other different certifications proving respect for the environment with our quality products and in all the production phases. This is something to be proud of but, above all, it is a guarantee for our customers.
