

## Installation Instruction for Floor Lamp

### 一、Installation Preparation

List of Accessories:

White iron circle

Lampshade

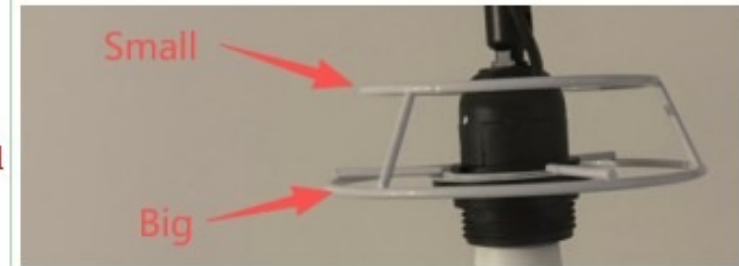

Light pole

## 二、Installation steps

### 1. Prepare the ring components

Remove the integrated metal ring with both large and small sizes. Differentiate between the "Big" and "Small" ends.

### 2. Install the main body of the lampshade

Insert the accordion-style folding lampshade onto the small ring from one side, so that the top edge of the lampshade aligns perfectly with the inner side of the small ring. Make sure there is no curling at the edges.

### 3. Embedded into circular slot

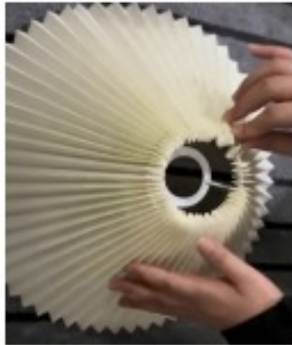

Align the top of the lampshade that has already been inserted into the small ring with the slot on the lamp stand, and press down to ensure that the edges are fully inserted into the slot to prevent the lampshade from falling off.

### 4. Fixed lampshade

Lower the large ring in that direction, place your hands inside the lampshade, and spread the lampshade outward to both sides to create uniform radial folds. Move gently to avoid any pulling or damage.

<p>5. Initial formation</p>	<p>Lift the assembled lampshade completely upright and check if the wrinkles are uniform and if the circular ring is level. If there is any inclination, gently adjust the position of the metal ring.</p>	
<p>6. Complete the installation</p>	<p>Check the overall shape, confirm that all components are securely attached, then install the lampshade onto the wooden stand of the floor lamp. Again, check if the lampshade is level and free from any shaking.</p>	

<h3>三、Installation Tips</h3>		
<p>Gentle operation: The pleats of the organ lampshade are relatively fragile. When unfolding and adjusting, apply even force to avoid excessive pulling that could cause damage.</p>	<p>Alignment check: When inserting the metal ring, ensure that the edges are perfectly aligned; otherwise, it may cause the lampshade to tilt or have uneven folds.</p>	<p>Shape adjustment: If there are local wrinkles or unevenness on the lampshade, gently pull the affected area in the opposite direction with your hand until the overall shape is uniform and aesthetically pleasing.</p>
