

A perspective drawing of a long, segmented metal pole. The pole is composed of several cylindrical sections joined by small, dark, rectangular connectors. At the left end, there is a small, dark, rectangular component, possibly a handle or a mounting bracket. The pole extends towards the right, where it ends in a wavy, corrugated section, resembling a flexible hose or a specialized end fitting. The drawing is done in a simple, clean style with black outlines on a white background.
