

Precision Base System

Stable Drainage and Secure Support for Daily Confidence

MonBlari Precision Leveling

Standard Style
Water Remaining

Built around two core technologies: lift-adjustable leveling feet and a sealed drainage hub, combined into a precision-engineered base chassis. It helps prevent common bathtub issues at the source:

- Wobbling caused by uneven floors.
- Poor drainage that can lead to standing water and stains.
- Leak risks during or after installation.
- Premature aging and leakage often seen in standard PVC components.

More than an upgrade, it's a renewed commitment to safer, more comfortable bathing.
