Installation Steps

Wall Mount Installation

NOTE These fixings are suitable for solid walls only. Plasterboard or stud walls may require specialist fixings.

Step 1.

Measure the distance between the center of each mounting hole on the back of the sink. Draw 2 marks on the wall in the desired mounting location. Ensure that the two marks are level with the floor.

Step 2.

Drill two holes accordingly using a 14 mm masonry drill bit to a depth of 75 mm. Push the anchor into each hole and screw in the hanger bolts.

Step 3.

Carefully place the sink in position against the wall. Locate the hanger bolts through the holes in the rear of the basin. Secure the sink with insulation sleeves, washers and nuts respectively.

NOTE DO NOT over-tighten, as this may cause damage to the ceramic sink.

Step 4.

Attach the drain assembly and faucet to the sink according to the manufacturer's instructions.

Step 5.

Apply silicone caulk around the edges of the sink where it meets the wall to prevent water from seeping behind the sink. Wait for 24 hours for it to dry.

Step 6.

Attach the P-trap assembly to the drain on the sink and connect it to the plumbing below. Install the water supply. Use a wrench to tighten the nuts and ensure there are no leaks.

Congratulations! You have successfully installed a wall mount bathroom sink.

Step 1.

After installing the ceramic sink, place the bracket underneath and mark the hole locations with a pencil.

Step 2.

Use an electric screwdriver to drill holes at the marked positions, then push the anchor into each hole.

Step 3.

Apply silicone caulk to the top of the sink bracket.

Step 4.

Position the bracket flush against the sink and wall, then secure it with screws.

Prevent water from seeping behind the sink. Wait for 24 hours for it to dry.
