

Sectional Assembly Instructions

- Check your delivery to ensure that you have all necessary parts
- Read all assembly instructions prior to assembling the product
- To avoid damage, assemble the product on a clean non-abrasive surface
- Enlist the help of another person, connecting the sectional is easier with two people

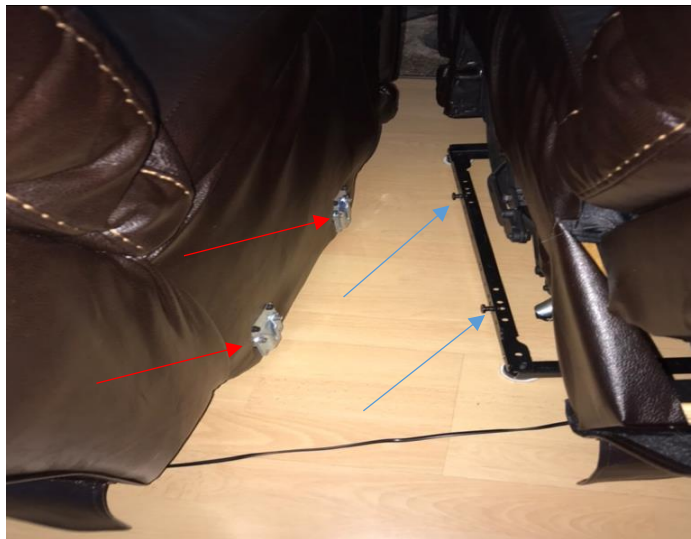

Step 1: Arrange the sectional pieces together in the desired location.

You will attach the sectional pieces together starting from Left to Right connecting one piece at a time.

Step 2: With the pieces close together, lift both sides of the two sectional pieces (approximately 6"-10"). When the pieces are aligned, slide the Pin (Male) connector into the Groove (Female) connector from above. When both Pin connectors are in the Grooves, carefully lower the two pieces together. Continue this process from left to right until all pieces of the sectional are connected.

The female/groove connectors are indicated by the red arrows while the male/pin connectors are indicated by the blue arrows.

To disengage, lift the sectional (Male) piece and slide the sectional (Female) piece away from the (Male) pins.
