## **SOLAR LIGHT**

### **How These Solar Lights Work**

During the day, the solar panel converts sunlight into electricity and recharges the battery. At night, the lights turn on automatically using the electricity stored during the day. The number of lighting hours depends on geographical location, weather condition and exposure time under sunlight. Under normal conditions, if the light is charged in full sunlight for about 8 hours every day, the light should last for at least 6 hours at night.

### **Choosing a Location**

Choose an outdoor location in full direct sunlight where the solar panel can receive at least 6 hours of light each day. Shadowed locations will not allow the batteries to charge fully and will reduce the hours of night-time lighting. The selected location should not be near other night-time light sources such as porch light or streetlight, as they may cause the solar light to turn off automatically.

### **First-time Use**

The solar lights should be charged in full sunlight for 24 hours with the switch in the "ON" position. This allows the rechargeable battery to reach its maximum capacity.

### **Using Solar Lights**

1. Press the power switch from "OFF" into the "ON" position so that the battery can be charged. (The "OFF" position means the solar lights are completely turned off and can't be charged.)
2. Then choose a suitable location, and the light will automatically turn on at dusk and off at dawn.

### **WARNING**

Do not dispose of the batteries in the regular trash, municipal waste streams or by fire, as the batteries may leak or explode. Do not open, short-circuit or mutilate the batteries, as this could result in injury. Preserve our environment by recycling the batteries or disposing of them in accordance with local, state or federal regulations.
