

# Manhattan Headboard- Optional Wing Assembly Instructions

Upon unboxing the optional wings for the Manhattan headboard you should have a left wing and a right wing along with 6 bolts. There are three attachment holes per wing, two exposed holes, hole #1 and hole #2, and one hidden hole, hole #3 which is on the back inside of the headboard.

Hole #1 & #2 may not line up initially. In order to get holes #1 & #2 to line up hole #3 needs to be screwed first. In screwing hole #3 first the headboard wing is sucked in to the headboard aligning holes #1 & #2.
