

## Overview: BTT9U

fanSync is a mobile application that uses Bluetooth technology to communicate with fanSync hardware and allows the user to control many features of his or her ceiling fan, all using an iOS or Android device. Users can easily control the light and speed components of the fan, and set the fan on a timer. fanSync is currently compatible with most fans that utilize an AC motor and is not brand specific, meaning it is compatible with fans that are not Fanimation made. With fanSync, users may use one device to control multiple fans, or control one fan on multiple devices.

The BTT9U is a remote control with wall mount only. Compatible with fans that have both up and down light kits.

## Special Features:

- Wall mount bracket included
- 3 fan speeds
- Uplight and downlight control

## Fan Compatibility:

Use with most Fanimation 3-Speed AC motor fans. For a complete list of other compatible fan brands and models, visit [www.fanimation.com/fanSync](http://www.fanimation.com/fanSync).
