

BAYONNE DECORATIVE BORDER FENCE

Read this manual carefully before use and save it for future reference.

Installation

Insert the first fence panel by pushing the legs into the soil.

Insert the second panel beside the first, ensuring the hook on the end of the second fence panel aligns with the hook hole on the first fence panel.

Repeat steps until all panels have been installed.

! HELPFUL HINT

If fence panels are installed near grass that requires mowing, consider leaving more of the fence panel legs exposed above the ground. This will allow for easier mowing and trimming. Avoid using powered weed trimmers near the panels as doing so may chip the powder coating or permanently damage the panel.

General Use & Care

INSTALLATION: Install into firm soil, installing into loose soil may cause the fence panels to lean or tip over. Do not install fencing into rocks or sand as it may damage the finish.

CLEANING: Use a slightly damp, soft cloth to wipe away dirt and debris.

WINTER CARE & STORAGE: Store this item during winter, especially in locations with ice and snow. Move fencing to an indoor location that is dry. Covering with a breathable cover while in storage will help prevent dust build-up.

Troubleshooting

THE FENCE POST DON'T INSERT FAR ENOUGH INTO THE GROUND

- Make sure there are no obstacles within the soil such as rocks, tree roots, or pavement.
- The soil may be too dry. Soak the soil with water and try inserting the panels again.

Any modification to the product or failure to follow recommended care will void the product warranty.
