

Playcation Quick-Tips

TIPS

Playcation

- Do not turn off the blower while in use. Otherwise, the castle will be shrinking.
- Because the structure of inflatable castle is seamed by traditional sewing technology, the product may contain some pinholes (less than 4mm). They will not affect the operation and use of product.
- The air (bubbles) and water leakages from pinhole are considered as normal. This is to ensure balanced pressure and to avoid over-inflation.
- Water seeping inside castle is common. Please life up the bouncer and pour the water away. If there is a water seepage inside the bouncer, wring out the water by bands, or to squeeze the water away with body weight. Make sure the bouncer is absolute dry before storing it.
- For general storage, keep in a dry and well-ventilated space.
