

Your furniture purchase is an investment. Here are a few tips to maximize the lifetime of your furniture with a minimum amount of effort. Properly caring for your furniture can help ensure that it looks great year after year.

[An introduction to your new leather upholstery](#)

Properties of leather that create its appeal

- Leather adapts to the ambient temperature of its environment and to your own body temperature.
- Leather is less hot or cold as compared to "leather-like" man-made materials.
- Leather is naturally fire proof-it does not support a flame if the origin of the flame is removed from the leather.
- Leather is naturally durable and resistant to tears.
- Leather will age and reach patina finish - Natural oils from your hair, skin and pets will add a luster to the leather and is not a quality issue.
- Our leather is made from bovine hides, each one a unique article and has natural markings of the animals environment that give the leather a "one of a kind" look - these healed scars, natural wrinkles or other such markings help to signify your upholstery item as a real leather possession.

Care for your leather furniture

- Avoid placing your leather under or near direct sunlight to avoid fading.
- Keep the leather item away from heat sources that may dry out the natural oils and finish.
- Regularly dust off the leather item (when you dust your wood furniture, dust your leather) with a soft, dry cloth.
- Spots or stains can easily be cleaned using a lightly damp cloth. Mild soap can be used, if necessary. Leather cleaners are available and can be used on stubborn areas (be sure to read and follow all product instructions and test a hidden area before using).
- Do not rub the soiled area. Use light, circular motions; working towards the center of the spot or stain.
- Dry immediately after the treatment or cleaning with a dry soft cloth (preferably white so as not to transfer any color onto the leather).

Our Inside Story

Our furniture is designed, developed and built to last. Using the latest manufacturing technologies, the frames, foam, seating suspension and other components are assembled to meet our stringent quality specifications. Frames are cut from furniture grade laminated and solid wood materials with reinforced, glued joints then completely wrapped in fiber and/or foam to protect the leather. Our seat foam is high density polyurethane cores wrapped in fiber.
