

Assembly Instructions Bench with Shelf

Step one: Attaching legs

With the pre-drilled holes on the legs facing inward, align the legs flush against the skirt. Use the enclosed hardware and screws to attach the legs as shown in the photo. Repeat this process for the remaining legs.

*Be careful not to over tighten the screws, as this may result in cracking.

Step two: Attaching lower shelf

Insert screw into pocket hole located on the corner of the underside of the shelf, and align with the pre-drilled hole on the leg. Attach with screw. Repeat for the remaining three legs.

*Second person may be required to hold the other end of the shelf while the first person attaches one end.

Note: Real wood expands and contracts, so the legs have adjustable felt feet. You may need to adjust them seasonally to ensure the bench is sitting flat. Simply turn them to the left to increase the height, or turn them to the right to lower it. *Extra screws may be included in the hardware bag.
