Ridge Porch Models

To build this model of shed, please use this Model Specific Instruction Manual along with the "ASSEMBLY INSTRUCTIONS FOR THE RIDGE PORCH OPTION, and the "STANDARD SHED INSTRUCTION MANUAL".

These three documents will give you all the information necessary to complete this project.

This manual outlines the specific parts needed to complete each stage, while the other manuals will give specific details on how to perform each stage. If you should have any questions please contact us at 1-800-830-8033 or sales@cedarshed.com.

DO NOT CUT any parts until you check with a CedarShed support team member.

For this model the stages of construction are as follows:

1. JOIST BOX ASSEMBLY
2. JOIST STRUCTURE ASSEMBLY
3. LEVELING OF JOIST STRUCTURE
4. INSTALLATION OF PLYWOOD FLOORING AND DECK BOARDS
5. STAGE 1 - WALL INSTALLATION
6. STAGE 1 - TRIM INSTALLATION
7. STAGE 2 - WALL INSTALLATION
8. TOP PLATE INSTALLATION
9. STAGE 1 - ROOF INSTALLATION
10. STAGE 2 - ROOF INSTALLATION
11. STAGE 2 - TRIM INSTALLATION
12. STAGE 3 - TRIM INSTALLATION
13. FINISHING TOUCHES

BEARING POINTS FOR 1614 AND BUILDING THE FLOOR JOIST BOXES

RIDGE PORCH SIDE

Each bearing point represents a spot where the joist boxes intersect each other. Using a cement block at each of these points, level the joist structure once the joist boxes have been affixed together. Use the diagram above to plot the bearing points on your building site. Please note that these are the minimum number of bearing points and you may wish to use additional cement blocks as need would justify.

COMPLETING THE FLOOR JOIST STRUCTURE

Take the joist boxes and affix them as per the diagram above. Make sure you keep the orientation of the ridge and gable porch in mind when doing this. Use 3" screws every 12" to affix all the joist boxes together. Once complete, lay the joist structure on top of the building site and level the joist structure on top of the cement blocks. Please use the cedar packaging blocks to assist in the levelling process. Make sure when level the joist structure clears the ground. This will allow the proper air circulation to prevent dry rot occurring on the joist structure.

There may be a need to affix joist trims on your specific model. If it is needed the diagram below will show details of how this is to be done.

INSTALLATION OF PLYWOOD PANELS AND RIDGE PORCH DECKING

The next few pages will outline the steps to install the plywood flooring and the deck boards to the ridge porch areas.

INSTALLATION OF PLYWOOD FLOORING & ADDITIONAL JOIST FOR GABLE PORCH SECTIONS

Now lay the plywood sheets over top of the joist frame. Each sheet of plywood (based on size) will lay over top of the various floor boxes that have been built and attached together. Then by using the 2" screws provided, affix each sheet using a screw every 12" on centre on each of the joist members (rows). As an example, to affix a 69" by 48" sheet to the joist frame would require 30 screws (6 joist members by 5 screws per row. See Fig 3 for details

Fig 3.

Lay the 46 ½" long deck boards over top of the level floor joist structure. Use 2- 2" screws to attach the ends of each board and 1-2" screw to affix to the interior joist. The number of deck boards will vary based on the width of each board.
