

Wall Clock Instruction Manual

Welcome to buy our products, thank you for your purchase and support. Tomake sure the clock works properly, please read the instructions andprecautions.

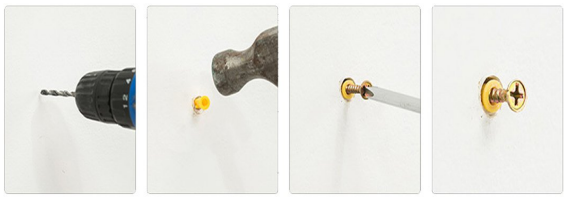

1. Put 1 AA carbon battery into the battery compartment on the back of the clock. (Please do not use alkaline batteries, as the current output of alkaline batteries is too high and will affect the accuracy and life of the clock's timekeeping).

2. Set the time and turn the movement rotary button (turn to the right to adjust the time, do not adjust the time by hand as this may damage the clock mechanism).Choose a suitable position, be careful not to hurt your hands.

3. Manual measurement, the actual size may have a few millimetres of error, please understand.

4. When the pointers are deformed and stick together or rub against each other, you can adjust the pointers according to this picture and pull the pointers upwards until the pointers are parallel and do not touch each other.

Tools you may need: Hammer
Electric drill

1.Determine the installation position,use a power drill, drill into the wall.

2.Tap the expansion screws into the wall

3.Screw the nails into the expansion screws

4.Installation complete
