

Solar Powered Vintage Bulb String Lights – Warm White

ASSEMBLY AND OPERATING INSTRUCTION

 Please operate strictly according to the Instruction.
Don't modify the product.

CONTENTS & SPECIFICATION

- 1.Solar Panel with Vintage Bulb String Lights
2. Ground Stake

HOW SOLAR LIGHT WORKS

During the day , the solar panel collects sunlight and converts it into electrical power stored in the rechargeable battery included. At night , the photo sensor built to the solar panel , sensing the absence of light , turns on the solar light automatically using electricity stored during the day . The more sunlight the fixture the gets , the stronger the charge will be and the longer your fixture will illuminate at night.

PREINSTALLATION

- Ensure the mounting location for your solar light allows the solar panel to receive a full day of direct sunlight .
- Do not install in shady areas as this will significantly reduce performance at night .
- The Lamp should receive a minimum of 8 hours of sunlight per day for optima performance at night .
- Be sure that location is not near the ambient light from other light sources during evening hours. These light sources many affect the photo sensor and cause the lamp to turn off .

ASSEMBLY

NOTE:DO NOT USE A HAMMER . If the ground is too hard,use water to soften , or use a metal rod or a screwdrive into the ground to create a hole for the ground stake.

- 1.Connect stake to solar panel
- 2.Remove protective film from the solar panel
- 3.Decorate the location chosen for the string lights

TO TURN ON

- 1.There are two modes of operation –Lights stay on (S)–Lights Flashing (F)
2. For first use, move the switch on the back of the solar panel to “S” or “F” as per picture to the right and allow to charge in full sunlight for at least 8 hours

TO REPLACE THE BATTERY

Should the light source start to dull or stay on for shorter amount of time we recommend that the rechargeable battery be replaced in the following way.

- 1)Remove the 4 screws on the back of the solar panel and open the back cover taking care not to damage any wires

NOTE:Using similar rating and type that shipped with the original solar light (1.2V Ni-MH AA 400mAh).Make sure to install the battery matching the correct polarity(+/-).

Caution:BATTERY MUST BE RECYCLED OR DISPOSED PROPERLY.

TROUBLE SHOOTING TIPS

- 1. Battery not fully charged:**Make sure the location for your solar light allows the solar panel to recieve direct sunlight everyday.If the solar panel does not receive enough sunlight during the day(e.g.due to cloudy or overcast weather conditions), it will be recharged on the next sunny day and resume operation.
- 2. Other light sources:**The location of your solar light is near the ambient light from other light sources, which affect the photo sensor and turn off the lamp.Relocate the fixture or eliminate those other light sources.
- 3. Battery may need to be replaced:**The battery is reaching the end of its lifespan and need to be replaced.

MAINTENANCE

Periodically clean the solar panel with a wet cloth.

Do not apply any solvents or chemicals.

Remove battery if light is not used for long periods of time.

WARNING:Read,understand and follow the safety rules in the document,before operating operating this product.
