INSTALLATION INSTRUCTIONS

1
You should clean all the dirt from valve outlets. Turning off the water supply valves. This is usually found near the water meter. If you are replacing an existing faucet, remove the faucet from the sink and clean the sink surface thoroughly.

2
Install without Deck Plate. Make sure the O-RING is placed onto the bottom of Base Ring. Install faucet through hole in sink. From underside sink, Put Plastic Washer and Mounting Nut. Position faucet on sink properly and tighten Mounting Nut.

3
Make sure the O-RING is placed onto the bottom of Base Ring. Install faucet through Deck Plate. From underside sink, Put Plastic Washer and Mounting Nut. Position faucet on sink properly and tighten Mounting Nut.

4
If necessary, tighten screws using an adjustable wrench until the faucet is firmly connected to the sink.

5
Connect hot and cold water supply lines to the water supply valves

6
As shown. Insert Flange with Washer through Sink drain Hole. From underside, thread Drain Body into Flange. Holding the drain body in position with Ball Rod Opening facing back, tighten Metal Locknut securely. Thread Drain Tailpiece into Drain body.

7
Lift the handle up, the cartridge will be activated allowing water to flow. The water flow will increase by continuing to rotate handle. By rotating the handle to the right, the water temperature will decrease to cold flow only. By rotating handle to the left, the water temperature will increase to hot only.

8
After installation is complete, remove Spray head and rotate handle to the close position. Turn Water Supply Valves on, and check all connections for leak. Flush faucet by running hot and cold water in full position for one minute. Re tighten the Spray Head.
