

BRASS Accents, Inc. Floor Air Registers

BEFORE INSTALLING INSTALLATION

BRASS Accents, Inc. Floor Air Registers are for a D-I-Yer to install. If unsure or not familiar, we recommend consulting a professional for the installation. We accept no liability for any damage to the home or personal injury during installation. Local building codes should be reviewed. Unpack and inspect the register for any damage. Contact you **BRASS Accents, Inc.** dealer if help is needed.

IMPORTANT ORDER INFORMATION: All of **BRASS Accents, Inc** registers are listed on our website by damper size and this method is industry standard. To measure for the proper size, remove the old register cover (see **Removal** image below) and measure the air duct opening in the floor. The damper sits into the opening of the floor/air duct. Louvers in the dampers are adjustable to the desire air flow. The lip of the decorative floor air register sits on the surface of the floor.

Prepare for the installation of the new register cover (screws on old register may need to be removed). Insert the new floor air register damper into the duct opening of the floor (see **Install** image above). The decorative floor air register is designed to sit on top of the floor. There are no installation screws or mounting hardware needed for these floor air registers.

ENJOY your new floor air register!
