

## MULTI-FUNCTIONAL

The trick to make this table more sturdy:

Step 1: Place the top upside down on the floor and screw in the bolts until they both have some resistance.

Step 2: Tighten them a little bit at a time alternating bolts. Once both the bolts are tight hold the end of the and push and pull it back and forth. You will find the bolts are now loose.

Step 3: Tighten the bolts again as before and repeat to get to the point where pushing and pulling the leg no longer loosened the bolts. At that point the leg was very solidly attached.
