

INSTRUCTIONS

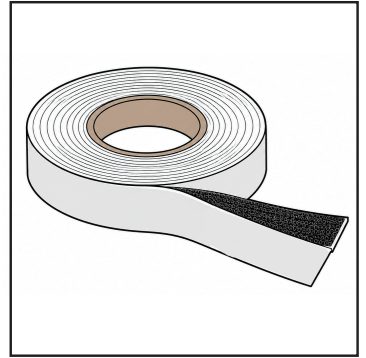

Garage Door Cover*1

18in Bungee Cord with Hooks*2

26ft Bungee Cord *1

Velcro*1

Method A- The Quick & Easy Method

(Most popular - up in minutes!)

1 Clean the Surface

Close Your garage door and wipe the top of your garage door with rubbing alcohol or soap water to remove dust and debris. Let it dry.

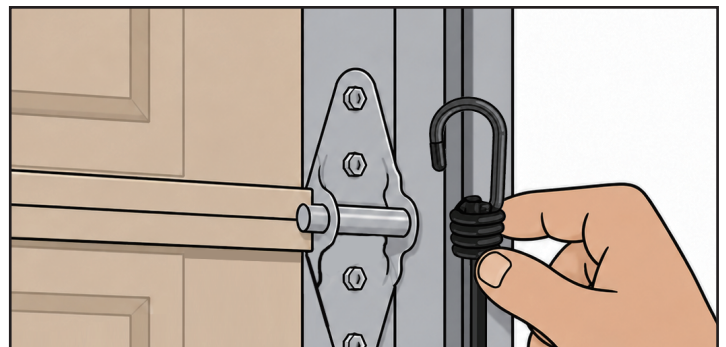

2 Stick The Velcro Base

(Before putting the Velcro, hold the cover in place and confirm the bottom edge sits where you want.) Apply the Velcro strip (full or in sections) and press firmly. Then attach the banner to the Velcro.

3 Attach The Top

Attach the top of the banner to the Velcro.

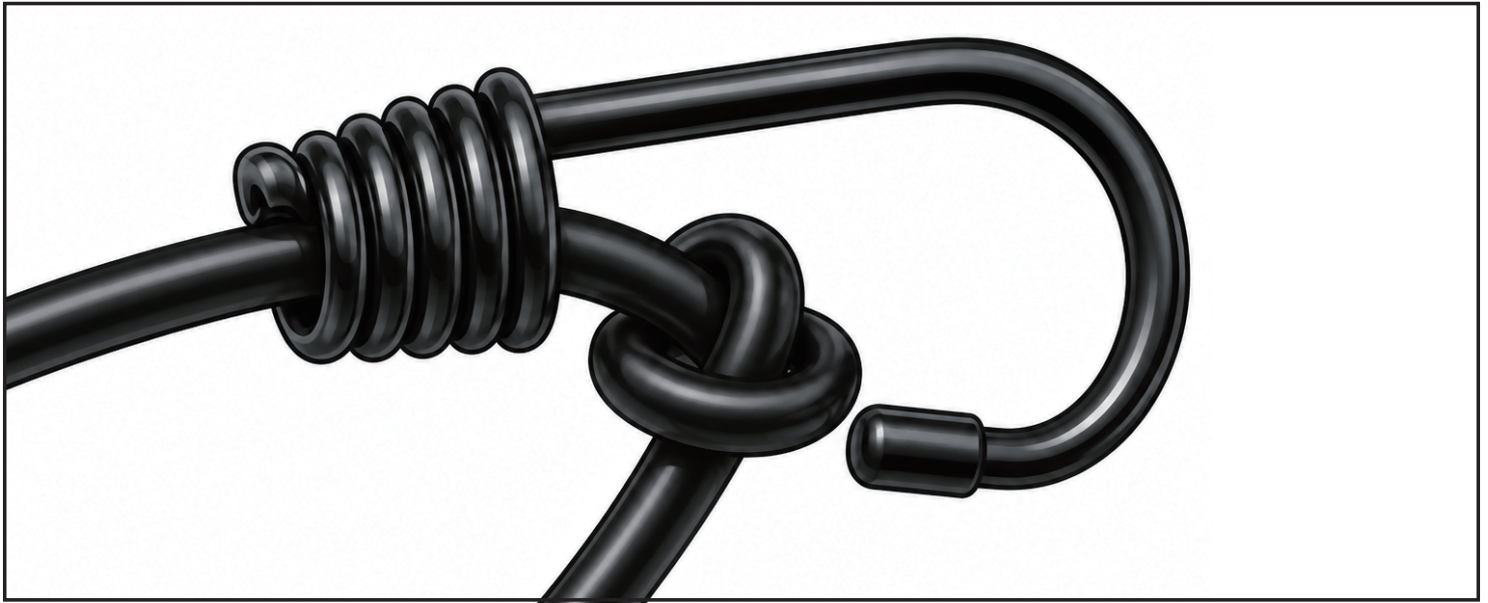

4 Hook the Corners

Open the door 1/4. Adjust the size of elastic bands so the cover is snug but not overstretched. Stretch them and hook them onto the second hinge behind your garage door. Open and close the door once. If too tight at halfway, lengthen slightly.

TIPS:

- 1 For enhanced stability, secure the top edge of the cover using the two grommets provided. Feed a 26ft bungee cord through the grommets and fasten it tightly to the garage door frame or upper brackets. Please trim or adjust the cord length to suit your specific installation environment.

- 2 If the banner appears loose, adjust the tension by shortening the bungee cords. Simply pull the cord end through the large hook to your desired length and secure it with an overhand knot.
