! Usage Tips

① Preheating:

Always preheat: Press the 2CUP button before brewing to warm up the system and cups.

② Why?

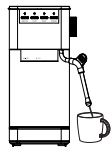

Cold brew head/filter/cups = compromised extraction = weaker flavor

③ Overheat Protection:

After steaming milk:

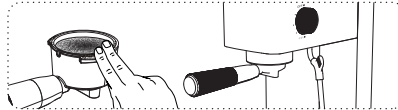

1. If buttons flash when brewing → Stop and let cool
2. Open steam knob fully until water stream appears → close

② Leak Prevention:

Key step: Clean the portafilter rim thoroughly before locking in

Pro tip: Wipe with dry finger for perfect seal.

New Machine Break-in

Initial loud noises = normal air release in new units.

After the regular use, it'll quiet down to a smooth hum.
