

INSTALLATION INSTRUCTIONS

DRY APPLICATIONS:

Suitable for interior dry walls

Not suitable for floor applications

- Install with traditional mortar
- Grouting is not required , but can be used to cover gaps in between sheets
 - If grout is utilized, apply grout with grout bag
- A sealer is recommended

WET APPLICATIONS:

Suitable for interior and exterior wet walls in non-freezing applications

Not suitable for submerged applications

Not suitable for floor applications

- Natural stones may darken when wet
- Apply a water-proof membrane under the backerboard/substrate below the mortar
- Use a high bond strength mortar
- Seal the stone allowing it to cover all gaps between the mosaic chips so the sealer covers all sides
 - Repeat this step until water bids up on the surface of the tile. Let the sealer dry completely between coats
- The sealer will help reduce the darkening of the stone, but will not prevent it completely
- Grouting is not required , but can be used to cover gaps in between sheets
 - If grout is utilized, apply it with a grout bag
- If grouted, sealed the stone and grout one more time
