

Function: perm, hot oil treatment, hair dye, sterilization, fast and obvious effect, novel and beautiful appearance.

How to Use

- Connect the power cord plug to the 110V power supply.
- Adjust the hair accelerator positioning hose to the proper position on the customer's head.
- Press the power switch, at which point all bulbs light up.
-
- Turn the temperature knob left or right to set your desired temperature.
- The working time is set by a professional hairdresser according to the customer's hair type (the recommended general use time is 10-20 minutes).

Attention

- Hair accelerator in the use of the process of higher temperature, so do not casually move the groups of bulbs and too close to use, not to touch the lamp shade and bulbs with your hands to avoid burns and cause unnecessary injury.
- Do not use in unstable places such as inclined, wet, shaggy carpets, or with many people walking around.
- Please suspend the use of the bulb when working, such as smoke, rupture, etc., to find out the cause or find professional technicians to solve the problem before continuing to use.
- If the power cord is damaged, it must be replaced by the manufacturer or a designated service department.
- After each day's work, please unplug the power supply for safety (note that you need to hold the plug firmly in your hand when unplugging).

Notice

Our products such as quality problems, free warranty for three months, such as improper use or human disassembly and repair damage, the factory is not responsible. Please understand that bulbs and tubes are consumable products, so they are not covered by the warranty.
