D. Installation Steps

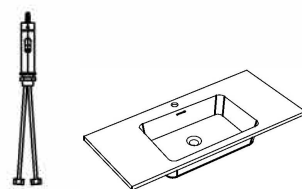

Medicine Cabinet Installation:
Screw the corresponding holes
in the cabinet to the wall. Add
decorative covers.

1 2

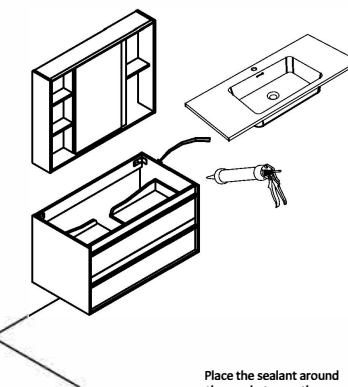

Install main cabinet:
Mount cabinet to the wall
by screwing the holes

3 4

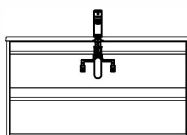

Faucet installation:
Install the faucet to the countertop and ensure that
the connected hose is tightened. Make sure there is
no water leakage and the faucet is tightened without
twisting

5

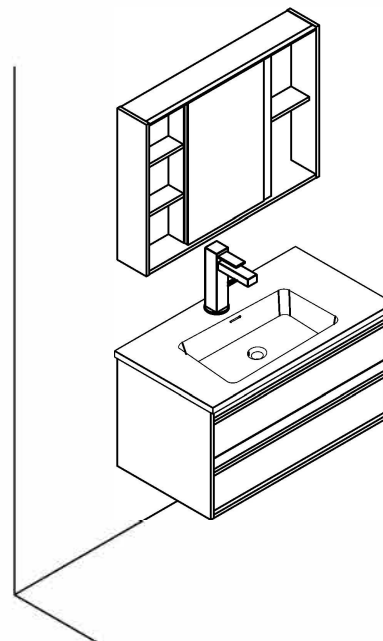

Place the sealant around
the gap between the
countertop and the vanity

Hot and cold water pipe installation:
The hose and the inlet water cooling pipe are
tightened with no water leakage, and the hot and
cold water pipe connections are synchronized
with the faucets hot and cold switches.

E. Final

F. Maintenance

⚠ Attention

 Prohibited	Cleaning agent with acidic properties	*Please Note* Bathroom cabinet may change color
	Cleaning agent with alkaline properties	
 TO BE FOLLOWED	1. Many cleaners contain abrasives and chemicals that cannot be used to clean stainless steel, enamel, plating or plastic products. These surfaces must be cleaned with a mild detergent or non abrasive solution, and then wiped dry with a clean soft cloth.	
	2. Please keep a good ventilation in the bathroom. Keeping windows and doors open help ventilate bathroom spaces.	
	3. The bathroom cabinets are subjected to strict moisture-proof treatment. The bathroom cabinets should not be watered or splashed. Good moisture resistance can ensure good use at high relative humidity, however please avoid the bathroom from getting too humid.	
	4. Maintenance of the door panels: Regularly clean and wipe with a soft cloth. Water vapor after bathing should be dried with a dry cloth to keep the door panel dry.	
	5. Moisture-proof mirrors are best wiped with suede, which can guarantee the quality of use and extend the lifespan of the product.	
	6. Do not sit, lay, lean on, or step on the vanity cabinet/countertop during daily use.
