

Make sure bigger holes are on bottom when assembling so you can easily attach to tabletop.

With small holes facing up slide the leg piece into the side brackets and line up the holes. The 3 holes will receive the bolts and are on the inside of the base.

Put all pieces together.

Then screw in your bolts using provided allen wrench (you can also use power screwdriver if you have a bit that fits).

And finally, screw in the provided adjustable feet.

\*\*To attach your tabletop, we provide wood screws as well. Please make sure that the screws provided are not too long for the tabletop you are attaching to or they will go through your tabletop.
