

# THE GOUGH

Bathroom Collections

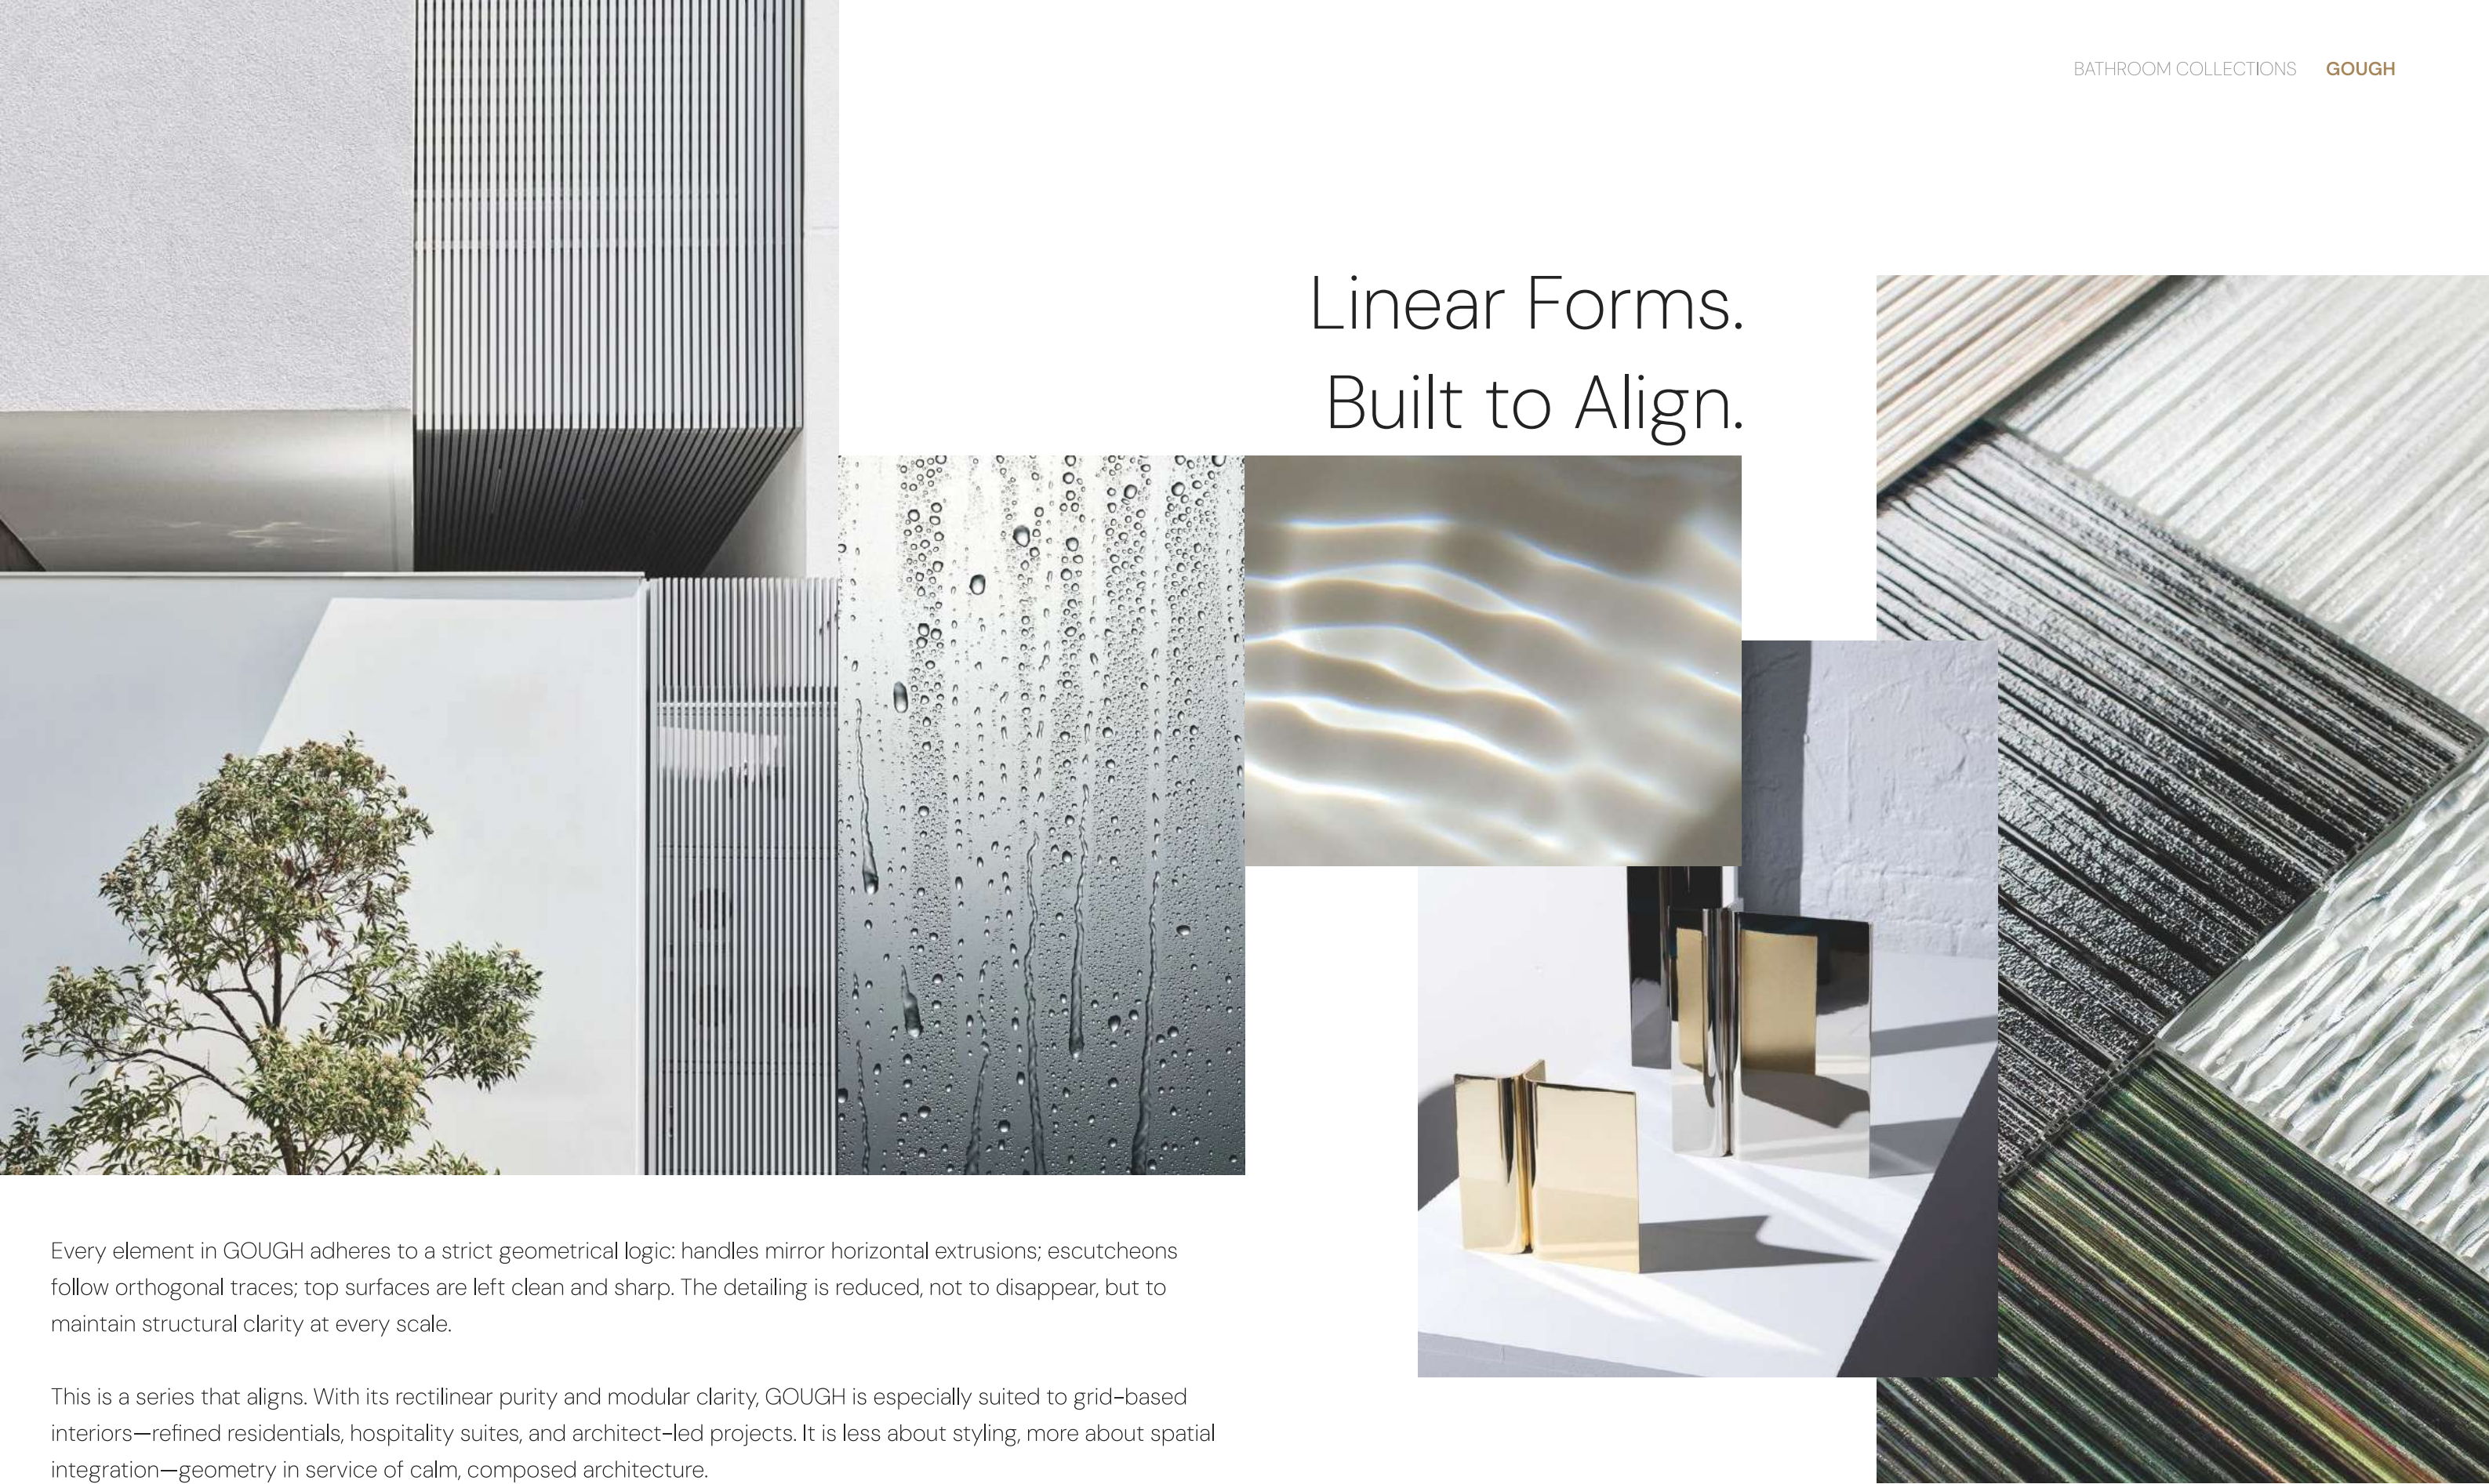

At the core of GOUGH is the line—repeated, refined, and precisely placed. The series leverages vertical fluting, crisp edges, and axial compositions to echo architectural rhythm. These aren't decorative gestures, but deliberate alignments that give form its tension and coherence.

GOUGH draws from the visual discipline of modern architecture—where form follows function, and structure is made visible. It translates the spatial clarity of cantilevered planes, linear façades, and metal louvers into an elemental design language for the bathroom.

# Linear Forms. Built to Align.

Every element in GOUGH adheres to a strict geometrical logic: handles mirror horizontal extrusions; escutcheons follow orthogonal traces; top surfaces are left clean and sharp. The detailing is reduced, not to disappear, but to maintain structural clarity at every scale.

This is a series that aligns. With its rectilinear purity and modular clarity, GOUGH is especially suited to grid-based interiors—refined residentials, hospitality suites, and architect-led projects. It is less about styling, more about spatial integration—geometry in service of calm, composed architecture.

More choice. More creativity.  
The Gough offers a refined palette of sizes, configurations and finishes, made to harmonize with different spatial moods and materials.

## Product Information

Gough offers a considered palette of standard and custom finishes. Custom finishes are made to order and may involve extended lead times. Please note that printed finishes for reference only and may not accurately represent final finishes.

For full specifications, technical details, and material samples, please contact your local dealer or project representative at [cranachpro@cranachome.com](mailto:cranachpro@cranachome.com).

### Standard Finishes

A curated range of standard finishes is available across core configurations, offering timeless stones and surface textures suited to most design contexts.

### Custom Finishes

FARNE also supports project-specific customization. Colors and finishes can be tailored to meet unique spatial or material requirements.
