

INSTRUCTION MANUAL

Welcome

Thanks for purchasing product T729. Please read this instruction manual carefully before use.

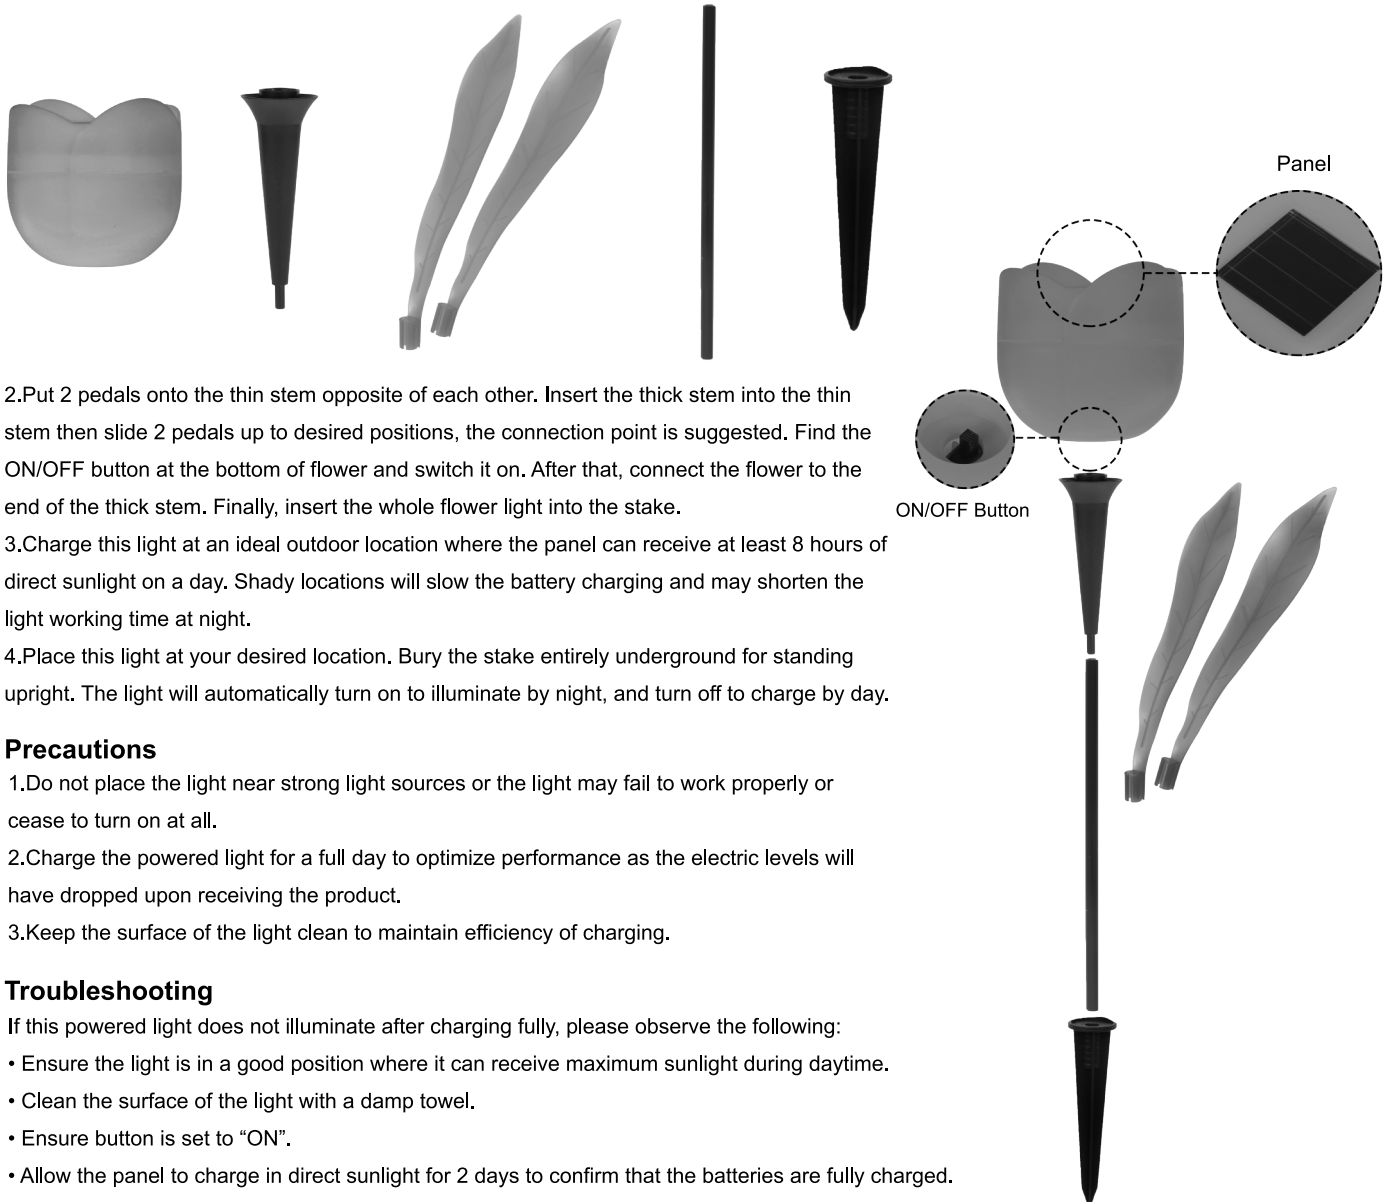

How the Light Works

During the day, the panel converts sunlight into power which is stored in the built-in rechargeable battery. When it turns to night, the light will light up automatically by using this stored energy. The actual working time of this light is mainly depended on placement location, weather conditions, and seasonal lighting availability.

Installation and Operation

1.This powered tulip flower LED light set comes in disassembled parts that need to be reassembled together before use.

Each light is disassembled into 5 parts: 1 x flower, 1 x thick stem, 2 x pedals, 1 x thin stem, 1 x stake showing as below:

2.Put 2 pedals onto the thin stem opposite of each other. Insert the thick stem into the thin stem then slide 2 pedals up to desired positions, the connection point is suggested. Find the ON/OFF button at the bottom of flower and switch it on. After that, connect the flower to the end of the thick stem. Finally, insert the whole flower light into the stake.

3.Charge this light at an ideal outdoor location where the panel can receive at least 8 hours of direct sunlight on a day. Shady locations will slow the battery charging and may shorten the light working time at night.

4.Place this light at your desired location. Bury the stake entirely underground for standing upright. The light will automatically turn on to illuminate by night, and turn off to charge by day.

Precautions

- 1.Do not place the light near strong light sources or the light may fail to work properly or cease to turn on at all.
- 2.Charge the powered light for a full day to optimize performance as the electric levels will have dropped upon receiving the product.
- 3.Keep the surface of the light clean to maintain efficiency of charging.

Troubleshooting

If this powered light does not illuminate after charging fully, please observe the following:

- Ensure the light is in a good position where it can receive maximum sunlight during daytime.
- Clean the surface of the light with a damp towel.
- Ensure button is set to "ON".
- Allow the panel to charge in direct sunlight for 2 days to confirm that the batteries are fully charged.

Specifications

Panel: Polycrystalline 2V 40mAh

Rechargeable Battery: 2V 200mAh, 2/3 AA battery

Quantity of Light: 6 pcs

Material: ABS plastic

IP Rating: IP55

Light Source: 1 LED x 13000MCD

Total Length: 46-47.5 cm/18.1"-18.7"

Flower Diameter: 6.5 cm/2.6"

Leaf Size: 20.5x3.4 cm/8.1"x1.3"

Stake Length: 10 cm/3.9"

Weight: 2.14 oz×6

Color: white, red, purple, yellow, blue, pink
