

New Interactive Solitary Beehive

Interactive

Roof hinges & trays
separate for inspection

Typical bee larvae cells
from inner trays

An interactive solitary bee and insect box constructed in durable FSC timber with individual cell trays which can be opened for inspection and/or cleaning.

This unique solitary beehive is designed specifically to attract non-swarming bees like the Red Mason Bee (*Osmia rufa*) and Leafcutter bee (*Megachile* spp).

Solitary bees do not swarm, are gregarious and safe around children and pets.

These bees are naturally attracted to holes in wood and the Wildlife World Solitary Beehive provides habitat that has become harder to find in modern gardens.

- **NEW FEATURE** the roof section flips up to reveal a perspex covered tray, allowing frequent easy monitoring of bee nesting activity and larvae development.
- Site in a sunny position facing between south to south east to catch some morning sun.
- Mounting height between ground level and 1.5m.
- No chemical treatments needed as the habitat is made from durable FSC certified timber
- Stacking trays may be inspected after bee activity has ceased (Autumn/Winter)
- Protect full bee tubes with mesh to prevent predation by woodpeckers

...the technical stuff

Bees and Other Pollinators

Code: SBH2
