

Installation Steps for a Semicircular Fish Tank

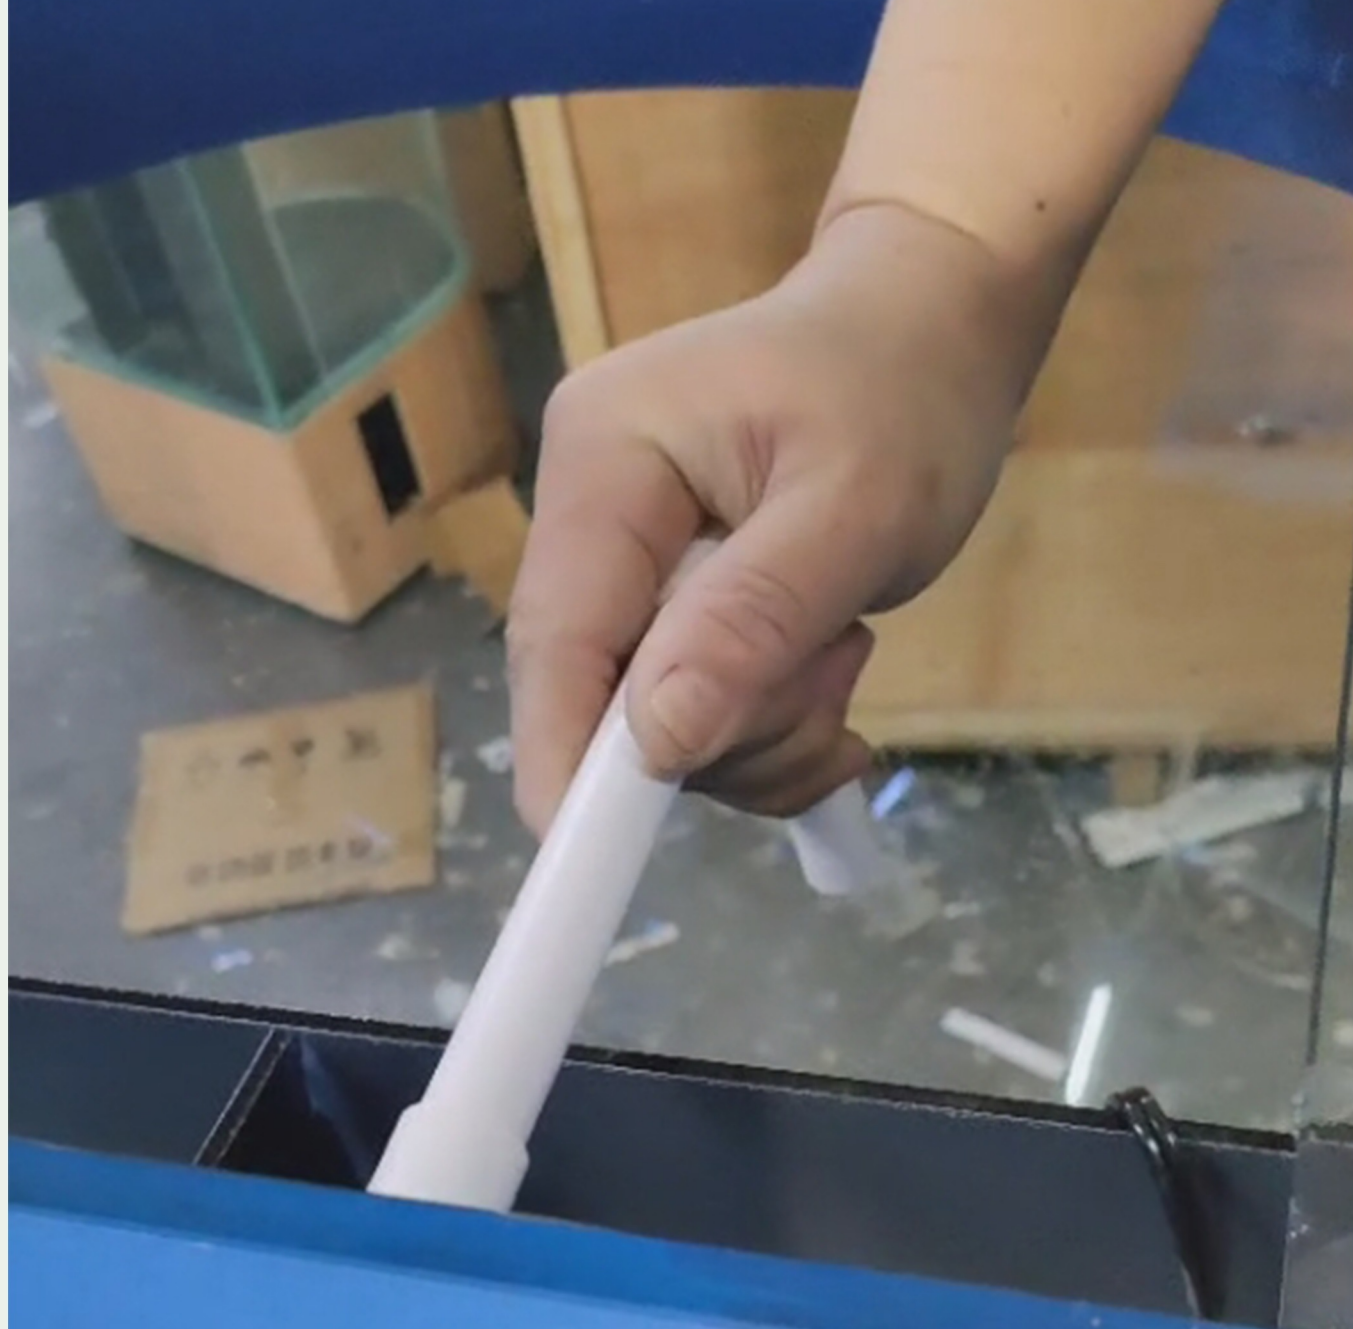

Check if all the pipe fittings are complete before installation

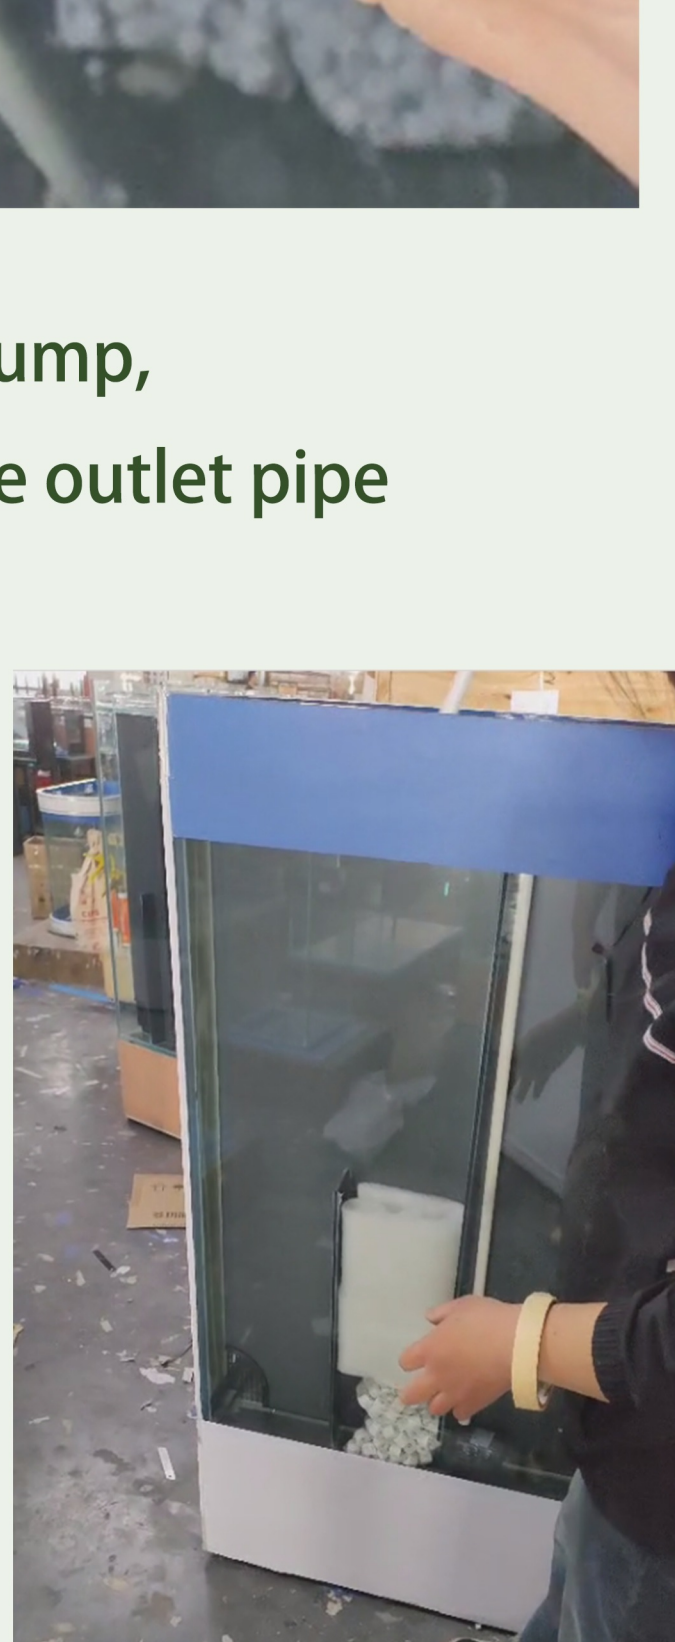

The small tube is directly inserted into the water pump

After disconnecting the water pump wires, directly place them into the aquarium's back filter

After placing the water pump, fit the white tube over the outlet pipe

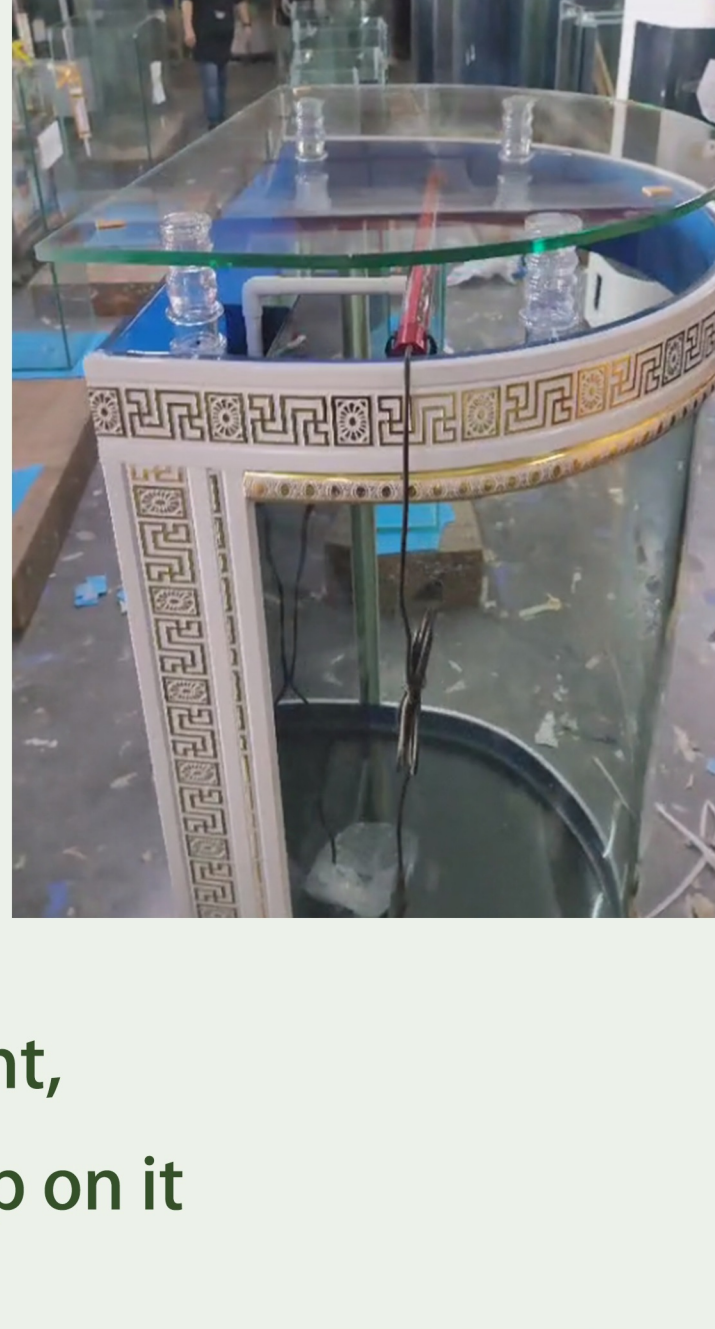

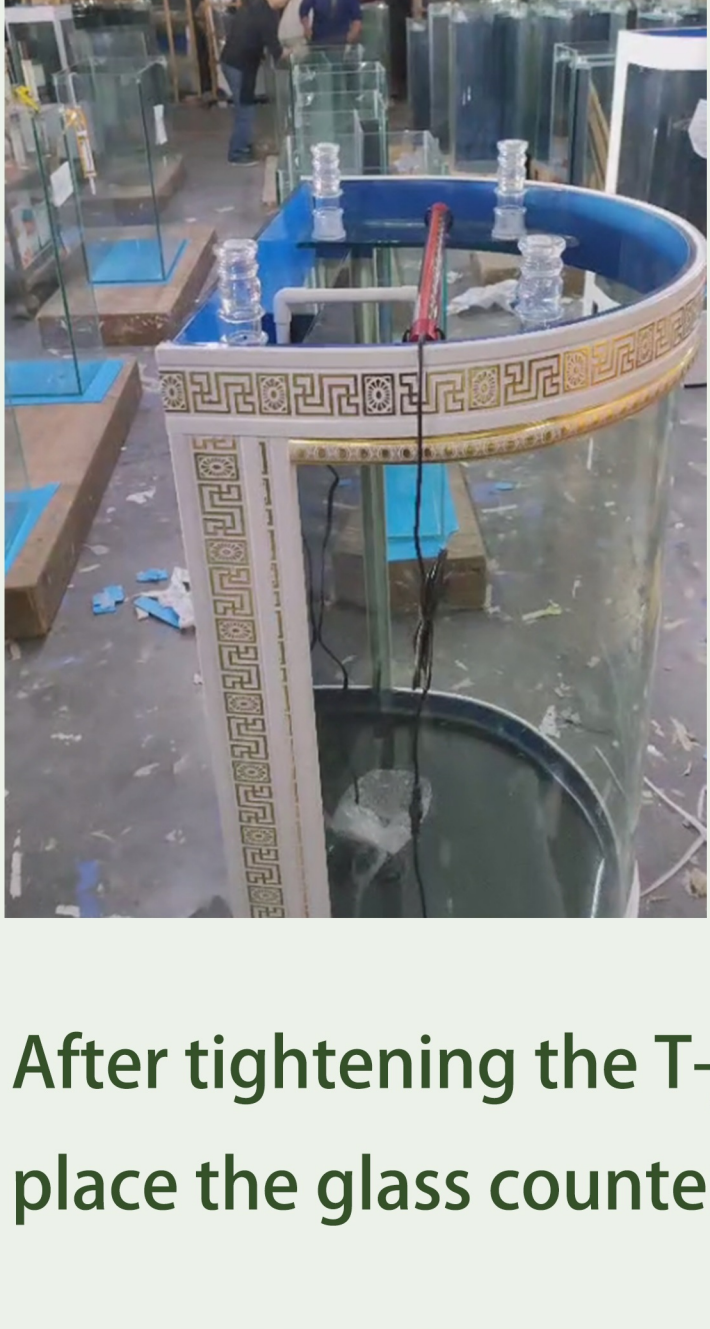

Place the filter material in the middle compartment, then place cotton behind it

This step involves installing red light tubes, placing them in the slots at the top of the aquarium

Tighten the four transparent three-way valves

After tightening the T-joint, place the glass countertop on it

The installation is now complete,

Thanks for watching!
