

Assembly instructions

Materials needed:

- A ruler or measuring tape (if not pre-drilled)
- A drill
- Torx bit T30 (if not included)
- Drillbit 4mm (if not pre-drilled)
- Screws (if not included, contact us for which screws you need)
- Another person to help you

Step 1:

Place the table upside down on the ground, on the cardboard or on a rug or blanket and place the legs upside down on the table.

Step 2:

If the table is pre-drilled, go to step 5. If the table is not pre-drilled, measure both ends from the legs to the short side of the table. Move the table leg so that it is the same distance on both sides. Around 15 cm is usual, but you can move them closer or further away as you like.

Step 3:

Repeat this with the sides. Move the table leg so that it is the same distance on both sides. Re-measure the front and the sides so that you are sure the measurements are correct.

Step 4:

Pre-drill 1-2cm deep holes in the tabletop in the middle of all the holes in the table leg.

Step 5:

Screw the legs to the table.

Step 6:

With two persons, first put the table on its side and then lift the table on its place.

Step 7:

Enjoy your table!
