

Attention Installer:

- Elkay recommends that drop-in sinks be installed by a professional, experienced installer.
- Elkay is not responsible for the sink or countertop if damaged during installation.
- Metal edges may be sharp. Use caution when handling.
- Follow all local plumbing and building codes.
- Inspect sink for damage prior to beginning installation.

Required Tools (not included)

Installation

WARNING: Always wear safety goggles and gloves when using power tools or handling the sink to prevent personal injury.

- 1** Position the sink upside down on the countertop.

Trace a line around the edge of the sink.

Draw a line $5/16$ inside of the outline of the sink.

- 2** Drill a pilot hole in all four corners of the inside line.

Use a saber or jig saw to cut on the inside line.

Place a support underneath the cutout portion of the countertop to prevent it from falling during cutting.

- 3** Apply silicone caulk (not included) around the cutout in the countertop surface.

Carefully lower the sink into the cutout.

Assemble the clips and screws.

From the underside, place a clip in the center along each side and hand tighten to hold sink in place. Fasten the remaining clips along the edges and space them approximately 3 inches from each end, and equally along the front, back, and sides. For countertops thicker than $3/4$ inch, clips can be spaced as close as 1-1/2 inches.

From the top, check the seal between the sink edge and countertop. Lightly tighten clips evenly with a screwdriver until the sink is tight to the countertop. Do not over tighten.

Wipe away any excess caulk with a rag.
