

Setting Up August Connect

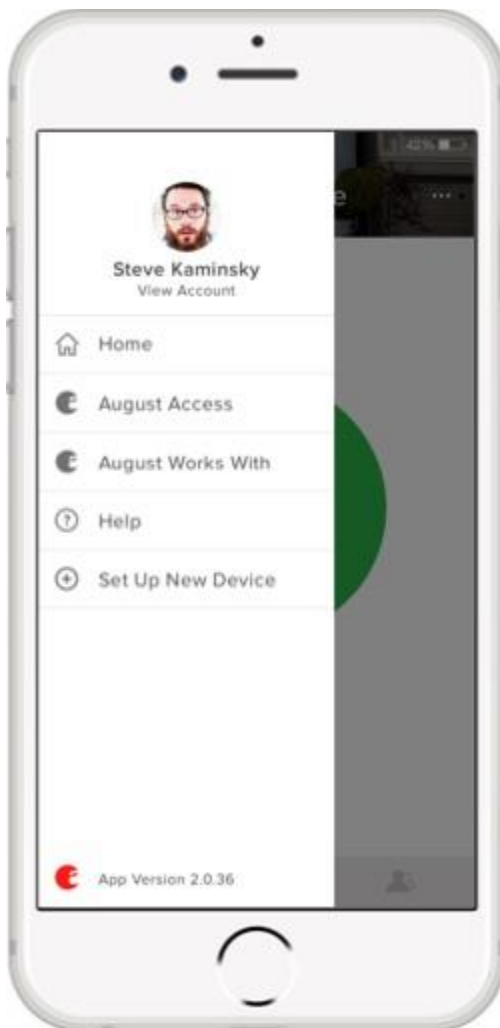

Requirements

- Make sure your iOS device has Wi-Fi turned on (Apple Settings > Wi-Fi)
- Make sure your phone is connected to your home Wi-Fi network (Connect is compatible with **2.4 gHZ** Wi-Fi)
- The August Connect requires an active August Smart Lock and needs to be installed using a compatible phone. Please visit our [phone compatibility page](#) to ensure that your phone is compatible.

To install your August Connect:

- **Plug In.** Plug your August Connect into a power outlet within 15 feet of your August Smart Lock for optimal performance and reliability.
- Wait for the flashing green light on your August Connect. If you don't see the flashing green light press and hold the button on your August Connect for 3 seconds.

In the side menu, tap Set Up New Device

Choose Set Up An August Connect

If applicable, choose a lock to associate your Connect with.

When prompted, plug connect into an outlet near your door. Follow the in-app instructions.

Apple's accessory setup interface will ask you to choose your home Wi-Fi network.

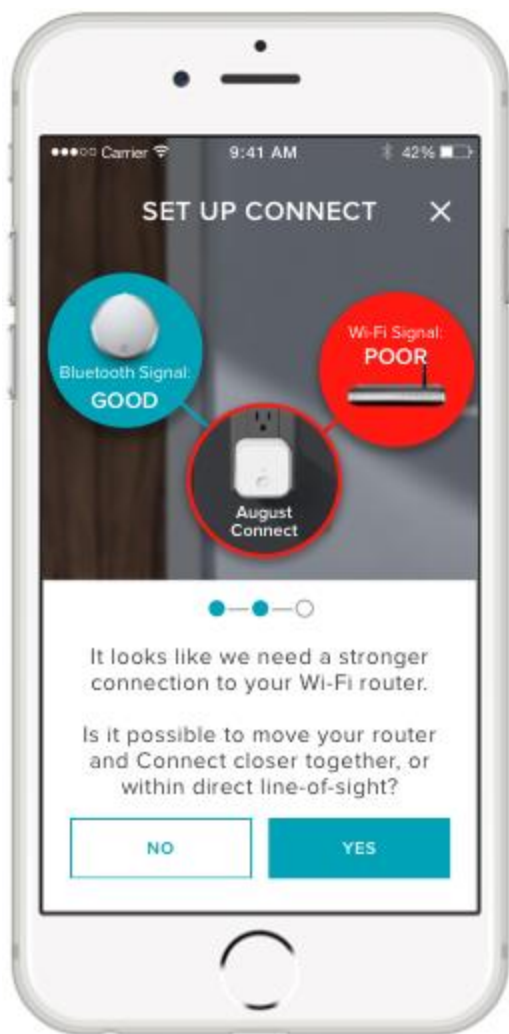

Once your Connect has successfully joined your home Wi-Fi network, the August Home app will check the signal levels of your Wi-Fi and bluetooth connections.

If your signal levels are good, you're just about finished.

If your signal levels are low, you will be guided through adjusting the location of your Connect to improve its connection.

Your Connect is now set up and ready to use!
