

Installation – English

1. Preparation and positioning

Align the V2 grille with the ventilation duct opening. Make sure it is perfectly centered and flush with the surface. Locate the two mounting holes on each end of the grille.

2. Installation

Fasten the grille to the wall or ceiling using two metal screws in the pre-drilled holes. Tighten evenly until the grille is stable, avoiding over-tightening to prevent distortion. Ensure that the grille is securely fastened and properly aligned.
