Checking, A Natural Process

All log furniture is subject to the natural process of "checking". Checking or cracking occurs when the wood releases moisture during the natural drying process and often occurs across the

annual growth rings. Checking does not affect the structural performance or integrity of the wood . The degree of checking will vary from product to product and even from log to log. Small pinholes scattered throughout some logs create additional contrast and beauty.

These characteristics add to the uniqueness of our furniture and lend it a unique rustic appeal that is so very popular with rustic furniture owners. As always,

All products are covered by our 20-year limited war-ranty and a 90-day, "no questions asked" return policy.
