

IMPORTANT:

Please note that the light is designed to work in the dark. If there are strong light sources nearby then the LED may be very dim or not work at all. Although the manufacturer has charged the battery, the charge levels will have decreased when you receive it. Please charge the solar panel for a full day to optimize performance. To charge the solar panel, place the solar panel in direct sunlight with the unit in the "ON" position. The surface of the solar panel must be kept clear, if not, this will influence the efficiency of charging.

AA 300mAh NI-MH BATTERY	
PANEL	
2V 20mA AMORPHOUS	
LIGHT APPEARANCE	
WARM WHITE	

PACKAGE INCLUDES:

- 1 Flower LED Light
- 1 Support Pole with Solar Panel
- 1 Ground Stake

BEFORE INITIAL USE:

Place the solar panel in direct sunlight to charge for 6-8 hours in order to sustain maximum performance.

CHOOSING THE RIGHT LOCATION:

An outdoor location with direct sunshine, where the solar panel can receive at least 6 hours of sunshine each day is an ideal location. Shady locations will influence the battery's charge and may shorten the working time of the light at night time.

The solar panel should not be placed near other light sources, such as street lights, as this may effect the sensor inside the solar panel.

The Solar light is ideal for night time lighting of the garden, lawn, patio, walkways or wherever needed. You can also charge the light outdoors then use as indoor illumination.

HOW TO USE THE SOLAR LIGHT:

fig. 1

fig. 2

fig. 3

fig. 4

1. Gently insert the connected support pole with the solar panel into the flower base, and tighten by twisting the stake clockwise. (Carefully push wire through bolt if needed) **(fig. 1 & 2)**

2. Connect the ground stake with the solar panel stake and secure the pieces together by twisting the stake clockwise. **(fig. 3)**

3. Pivot the solar panel 90 degrees downward so it is perpendicular with the assembled stakes. This will allow it to receive maximum direct sunlight. **(fig. 4)**

4. Turn the light "ON" by moving the toggle (located under the solar panel) from "OFF" to "ON".

5. Stake your metal flower at least 3-4" into the ground.

6. Rotate your metal flower so the solar panel is facing the sun.

DISPOSAL AND RECYCLING OF BATTERIES:

To protect the environment, batteries must not be thrown in the domestic garbage, nor disposed of in a fire as they contain dangerous materials.

Dispose of the batteries by taking them to your local waste collection service to be recycled.
