

Step 1: Unboxing and Inspection

1. Remove all components: Carefully take the main oven unit and all accessories (such as the wire rack, baking pan/crumb tray, air frying basket, etc.) out of the box.
2. Check for completeness: Compare the items against the accessory list in the manual to ensure everything is present and free from shipping damage. If any parts are missing or damaged, please contact customer service immediately.

Step 2: Initial Cleaning

1. Remove protective materials: Peel off all protective films, stickers, or foam from the inside and outside of the oven.
2. Clean accessories: Wash accessories—such as the wire rack, baking pan, and air frying basket—with warm water and mild detergent, then dry them with a soft cloth.
3. Clean the interior: Wipe the oven's inner walls with a damp cloth to remove any dust or oil residue left over from manufacturing. Note: Do not immerse the main oven unit in water or rinse it under running water.

Step 3: Initial Burn-in (Removing New-Unit Odor)

1. Placement: Place the oven on a stable, heat-resistant surface, ensuring there is at least 5 inches (approx. 13 cm) of ventilation space on all sides (especially the back and sides).
2. Burn-in: Set the temperature to 450°F (approx. 230°C) and the time to 15–20 minutes. This process burns off the protective oil on the heating elements; a small amount of smoke or odor may occur, which is normal.
3. Cooling: After the burn-in is complete, allow the oven to cool down naturally, then wipe the interior again with a damp cloth.

Step 4: Preparation Before First Use

1. Insert the crumb tray: Properly place the crumb tray at the bottom of the oven to catch food scraps that may fall during cooking.
 2. Connect power: Plug the power cord into a grounded 120V power outlet.
 3. Function test: Select any function (e.g., "Air Fry"), set the temperature and time, and observe whether the oven starts and heats up correctly.
- #### Important Installation/Placement Notes

Keep away from heat sources: Do not place the oven near gas stoves, electric cooktops, or heated ovens.

Avoid obstruction: Ensure the oven's air intake and exhaust vents are not blocked by any objects.

Child safety: The oven surface becomes hot during use; please keep it out of the reach of children.
