\*Wave reduction is achieved by adding layers of fiber inside the bladder. Wave reduction percentages are often a matter of personal opinion, however, the more layers of fiber that are added into the waterbed bladder, the less wavy your mattress will be. Strobel ® Hydro-Support Mattresses range from 0 layers (total free flow) to up to 9 layers of internal fiber for maximum wave reduction.

\*\*Added lumbar support is achieved by adding 3 additional layers of fiber in the region of the bladder that supports your lower back.

\*\*\*Patented Leak Proof Double Wall technology offers 2 benefits: 1) The outer layer ("double wall") protects the bladder itself from being punctured. If something sharp were to get on the waterbed and scratch or poke the bladder, the outer wall will most likely suffer the puncture rather than your bladder so you will be protected from a leak; 2) if a leak were to occur, the double wall would act as the primary liner and contain the water as much as possible so as to cause the least amount of mess possible in and around your bed frame.

\*\*\*\*Feather Top Surface is a feature that refers to the textured surface that is molded into the vinyl bladder itself. Feather Top is not a pillow top mattress pad or topper. The benefits of a Feather Top Surface is the added flexibility of the vinyl material itself which helps reduce pressure on the body for a more comfortable sleep.
