

STEP 7

Disassemble the faucet, place it on top of the plastic tank, and install a plastic metal ring at the bottom of the tank that is tightened and removed.

STEP 8

Insert the hot and cold water inlet pipes into the two holes at the bottom of the faucet, rotate and tighten them.

**STEP 9**

Soap bottle installation: Divide the bottle into two parts, align the holes and install them up and down.
Installation completed, as shown in the picture.

5

ASSEMBLY STEPS**STEP 4**

Reposition the groove onto the support plate, align the holes, rotate and tighten the screws, and then place the cap screw nut.

**STEP 5**

Disassemble the drain and divide it into two parts, the upper half and the lower half.

STEP 6

Place the upper part of the drain into the slot and tighten the lower part.

4

ASSEMBLY STEPS**Installation method for plastic sink****STEP 2**

Align the sink support plate with the drilled hole, insert the screw and gasket, and tighten them with a wrench.

**STEP 3**

Place the plastic tank on the support plate to confirm the hole position, and drill two holes with a diameter of 12. Place the plastic expansion tube into the holes.
