Outdoor Kitchen Assembly Instructions

For WPPO modular outdoor kitchen islands

Before you begin
The stone panels and 30 mm granite countertop are heavy. Use at least two adults and appropriate lifting equipment. Keep hands clear when positioning panels or the countertop.

Assembly steps

1. Plan the layout. Confirm the island size, appliance cutouts, clearances, and utility locations before moving the components. Plan gas and electrical connections with qualified professionals.
2. Prepare the site. Place the island on a firm, level, load-bearing surface suitable for outdoor use. Confirm the surface can support the assembled island, countertop, and any installed appliances.
3. Unpack and inspect. Compare the components with the packing information and check for shipping damage. Do not assemble damaged parts; contact the retailer for help.
4. Assemble the island body. With help, position the panels in the specified order. Use only the connectors, fasteners, and sealant specified for the island. Do not substitute hardware or add adhesive unless the product instructions call for it. Check alignment and level as you assemble.
5. Position the granite countertop. Use at least two adults or qualified stone installers. Lift from supported edges, keep the countertop level, and do not lift it by an appliance cutout. Set and secure it using the specified installation method.
6. Install appliances and accessories. Use only components that fit the cutouts and follow each manufacturer's instructions for mounting, clearances, and connections. Have gas and electrical work completed by qualified professionals. Do not operate appliances until installation and required inspections are complete.
7. Complete a final check. Confirm the island is stable and level, panels are secured, and the countertop is properly supported. Clean the stone and granite with products recommended for those materials.

Important information

This guide covers general assembly of the island structure and countertop. Appliances and accessories are included only when stated in the product listing. Follow any island-specific instructions and the instructions supplied with each appliance. Local building, gas, and electrical requirements apply.
